Two Legacies, One Sustainable Future

For decades, Highway Industries Limited and Roop Automotives Limited have stood as symbols of precision engineering, resilience, and manufacturing excellence in India's automotive components industry. Each company has built a distinguished legacy founded on technical expertise, operational excellence, innovation, and trusted partnerships with leading global OEMs. In FY 2024-25, these two respected organizations came together to form Highway Roop Precision Technologies Limited (HRPTL, bringing together complementary capabilities, decades of experience, and a shared vision to create long-term value for all stakeholders while building a more sustainable future.

FY 2025-26 marks HRPTL's first Sustainability Report as an integrated entity. Highway Roop Industries Limited (HRIL, formerly Highway Industries Limited) and HRPTL (formerly, Roop Automotives Limited) operated independently for over three decades, each building its own manufacturing base, OEM relationships, and operating practices. Following their integration in FY 2024-25, the organisation now reports as a single entity across 11 manufacturing plants, 55+ OEM partnerships, and operations spanning 17 countries.

HRIL, established in 1971, built its reputation over five decades as a precision manufacturer of forged, machined, and assembled automotive components. HRPTL, founded in 1991-92, developed its own capabilities in precision stampings, forgings, and assemblies over three decades. In FY 2024-25, the Carlyle Group's acquisition brought Highway Industries Limited and Roop Automotives Limited together to form HRPTL merging two distinct operating histories, management systems, and ESG maturity levels into a single, unified reporting entity.

What both companies carried into this integration, independent of scale or history, was a shared standard engineering precision, customer focus, operational excellence, and a commitment to responsible growth. That shared standard is now the foundation HRPTL's sustainability approach is being built on, rather than something either legacy needed to give up becoming part of one organisation.

Our sustainability priorities as a unified entity remain focused across three areas: strengthening environmental stewardship through responsible energy, water, and emissions management across our manufacturing footprint; building a safe, inclusive workplace that supports employee wellbeing and development; and maintaining strong governance and ethical business practices that keep us accountable to customers, suppliers, investors, and the communities we operate in.

The consolidation of the two entities within a single reporting boundary required the alignment of previously separate data collection processes and management systems. This integration was substantially completed during FY 2025 - 26, establishing a consistent and unified approach to sustainability data management and enabling the Company to present its performance through a single, consolidated account. Future reports will build on this baseline as HRPTL's governance structures and data systems continue to mature, including as the organisation prepares for its next phase of growth and its path toward public markets.

"Two Legacies, One Sustainable Future" is a description of what this year's report represents: two operating histories brought under one reporting boundary, one accountability structure, and one baseline. It is not a claim about the future - it is a record of the consolidation work completed this year, and the starting point HRPTL is reporting from, going forward".

Our Sustainability Reporting Approach

About the Report

This is HRPTL's ("Highway Roop", "Company", "Group", "Our", "We") first Sustainability Report, covering FY 2025-26. It gives a transparent account of HRPTL's Environmental, Social, and Governance (ESG) performance, highlighting key progress, focus areas, and future aspirations. As an integrated precision engineering enterprise, we see sustainable growth as inseparable from operational excellence, responsible manufacturing, sound governance, and stakeholder trust.

This Report goes beyond fulfilling a disclosure requirement and reflects our genuine belief that responsible business is better business. By integrating sustainability into the way we operate, make decisions and create value, we are strengthening our resilience, advancing responsible growth and preparing our business for the future. Through this report, HRPTL aims to share its sustainability journey, commitments, and progress while reinforcing accountability, transparency, and long-term value creation for all stakeholders.

Reporting Period, Scope, and Boundary

This report covers HRPTL's ESG performance for the period 1st April 2025 to 31st March 2026. All disclosures are presented on a consolidated basis, and all the operations of the Company are located within India.

The reporting scope covers HRPTL and its two subsidiaries HRIL and Roop Auto Forge Private Limited (RAFPL), giving a comprehensive overview of the Group's ESG performance, management approach, and sustainability initiatives for the year. The reporting boundary spans 11 locations across India, comprising one corporate office and eleven operational units.

Reporting Frameworks & Standards

This report has been prepared with reference to the Global Reporting Initiative (GRI) Standards 2021 and has also been aligned with the National Guidelines on Responsible Business Conduct (NGRBC) and the Securities and Exchange Board of India (SEBI)'s Business Responsibility and Sustainability Report (BRSR) framework. Additionally, it also maps our contributions to the United Nations Sustainable Development Goals (UNSDGs) and presents our greenhouse gas (GHG) emissions inventory in accordance with the GHG Protocol Corporate Accounting and Reporting Standard.

Restatement of Information

This is the first Sustainability Report of HRPTL, accordingly, there is no information from previous Sustainability Reports that requires restatement or retrospective revision.

Forward-Looking Statement

This report contains forward-looking statements relating to HRPTL's sustainability targets, plans, and future performance, including statements on emissions reduction, energy and resource management, and social initiatives. These statements reflect our current assumptions and expectations as of the date of publication and are not guarantees of future performance. Actual outcomes may differ materially due to factors including regulatory change, data and system maturity as our reporting practices evolve, and the pace of our operational and business growth. HRPTL does not undertake any obligation to update these statements to reflect subsequent events or circumstances, except where required by applicable law.

Responsibility Statement

This report has been prepared by HRPTL's Sustainability function in consultation with relevant business and functional heads across the Company and has been reviewed and approved for publication by the Company's Management. The Management confirms that, to the best of its knowledge, this report presents a fair and accurate account of HRPTL's ESG performance for FY 2025-26, and takes responsibility for the data, disclosures, and content contained within it.

Point of Contact for feedback and queries

We welcome your questions, feedback, and suggestions regarding this Sustainability Report. If you would like additional information about the report or our sustainability initiatives, please feel free to contact:

Leadership Message

***“Leading with Precision,
Transforming with Purpose”***

Dharmesh Arora
Chief Executive Officer

Message from our CEO

Dear Stakeholders,

It gives me immense pleasure to present the first Sustainability Report of **HRPTL** for FY 2025–26, marking an important milestone in our journey of transformation, integration, and sustainable value creation.

This year represents a defining chapter for our organisation as we continue to integrate the legacy strengths of Highway Industries Limited and Roop Automotives Limited into a unified enterprise with enhanced scale, technical capability, operational resilience, and strategic depth. The coming together of these two organisations has strengthened our manufacturing excellence, created operational synergies, and positioned us to better serve the evolving needs of the automotive and precision engineering sector.

Environmental Footprint

At HRPTL, we recognise that responsible manufacturing is fundamental to long-term business success. As a precision engineering company, we are committed to minimising our environmental footprint while improving operational efficiency across our manufacturing facilities. During FY 2025 - 26, we continued to strengthen our climate and resource management practices through renewable energy adoption, energy-efficient technologies, digital energy monitoring systems, process optimisation, and enhanced utility management. These initiatives have enabled us to improve energy performance, reduce GHG emissions, and optimise resource consumption.

Our sustainability journey also extends beyond our operations. We have initiated comprehensive GHG accounting covering Scope 1, Scope 2, and key Scope 3 emissions, conducted a Life Cycle Assessment of one of our flagship products, and continued integrating renewable energy across most of our facilities. These efforts reinforce our commitment to responsible resource management, climate resilience, and building a low-carbon manufacturing ecosystem.

Our People and Community

People remain at the heart of our organisation and our continued success. We are committed to creating a safe, inclusive, and future-ready workplace that promotes employee wellbeing, continuous learning, and professional development. We continue to strengthen our Environment, Health and Safety practices, invest in capability building, and promote a culture of accountability, innovation, and operational excellence.

Our responsibility extends beyond our manufacturing facilities to the communities in which we operate. Through our Corporate Social Responsibility initiatives, we continue to support programmes focused on solid waste management, education, women empowerment, healthcare, livelihood enhancement, and support for persons with disabilities reflecting our commitment to creating meaningful social impact while contributing to inclusive and sustainable community development.

Leading with Integrity

Strong governance remains the cornerstone of our long-term growth strategy. We are committed to conducting our business with the highest standards of ethics, transparency, accountability, and regulatory compliance. As we continue our journey towards the public markets, we are strengthening our governance framework, integrating ESG considerations into strategic decision-making, and enhancing stakeholder engagement across our value chain.

The partnership with **The Carlyle Group** has further strengthened our strategic vision, enabling us to enhance governance maturity, operational excellence, and long-term business resilience. Their global perspective and strategic guidance continue to support our ambition of building a future-ready, globally competitive manufacturing enterprise.

Looking Ahead

As we move forward, our vision remains clear - to establish HRPTL as a benchmark precision engineering company driven by innovation, operational excellence, responsible manufacturing, and sustainable growth. We will continue embedding sustainability into every aspect of our business while creating enduring value for all our stakeholders and the environment.

I extend my sincere gratitude to our employees, customers, business partners, investors, communities, and all our stakeholders for their continued trust, support, and partnership. Together, we will continue engineering solutions that create lasting value and contribute to a more sustainable future.

Warm Regards,

Dharmesh Arora

HRPTL at a glance

HRPTL manufactures precision-engineered automotive components for the global automotive industry, serving passenger vehicle, light commercial vehicle, heavy commercial vehicle, and off-highway segments. The company's product range includes steering yokes, steering joints, slip shaft and I-shaft assemblies, steering columns, among others.

We are leading global manufacturer specializing in advanced forgings, stampings, precision machining, heat treatment, surface coating, assembly, and testing of automotive components, created through Carlyle's strategic acquisition of Highway Industries and Roop Automotives. With over five decades of combined legacy, Highway Roop operates 11 state-of-the-art manufacturing plants and 14 international warehouses across 7 countries serving 50+ blue-chip OEMs and Tier-1 customers globally. Highway Roop's engineering capability spans a comprehensive product portfolio of 1,500+ products across 100+ categories, covering critical automotive subsystems including steering, transmission, and suspension, reflecting a legacy of precision engineering that underpins our approach to sustainable mobility.

Manufacturing capabilities span across forging, stamping, precision machining, heat treatment, surface coating, assembly, and testing, delivered across 11 manufacturing plants and 14 warehouses. Backed by IATF 16949, ISO 14001, and ISO 45001 and ISO 50001 certifications, our operations uphold a zero-warranty-claim record across our international customer base, a reflection of uncompromising quality and process discipline.

HRPTL operates as a single manufacturing platform combining the scale, precision, and engineering depth of two legacy organisations, positioned to support the automotive industry's transition toward safer, lighter, and more sustainable mobility solutions.

As HRPTL scales as a unified enterprise, sustainability is being integrated into how the Company operates, not managed as a separate initiative. This includes strengthening energy and emissions management across our manufacturing footprint, maintaining safe and inclusive working conditions for our employees and contract workforce, and reinforcing the governance structures needed to support transparent, responsible growth as HRPTL moves towards its next phase.

Our Vision, Mission and Core Values

VISION

We envision a world where every mobility is synonymous with absolute reliability powered by our torque and safety solution

MISSION

We partner with the mobility industry deliver superior torque performance and uncompromising safety through precision engineered solutions by harnessing technology, operational excellence and enduring relationships.

Our core values are anchored in the 3T3P philosophy - Transparency, Trust, Teamwork, Passion, Performance, and Partnership which serves as the foundation of our organizational culture and guides the way we conduct business, make decisions, and engage with our stakeholders. These values shape our interactions with employees, customers, suppliers, investors, and communities, ensuring that every action is driven by integrity, accountability, and a shared commitment to excellence.

We believe that transparency and trust are essential to building lasting relationships and maintaining stakeholder confidence. By promoting open communication, ethical conduct, and responsible governance, we create an environment where collaboration and mutual respect thrive. Teamwork encourages cross-functional collaboration, knowledge sharing, and collective problem-solving, empowering our people to work together towards common goals and deliver innovative solutions.

Driven by passion, our employees are encouraged to embrace continuous learning, innovation, and operational excellence in everything they do. This commitment is complemented by an unwavering focus on performance, where quality, efficiency, customer satisfaction, and continuous improvement remain central to our operations. We consistently strive to enhance our products, processes, and services while creating long-term value for our stakeholders.

Equally important is our belief in partnership, which extends beyond our organization to customers, suppliers, business partners, and the communities in which we operate. We nurture long-term relationships built on trust, integrity, collaboration, and shared success, enabling us to create sustainable value across our value chain. Guided by the 3T3P philosophy, HRPTL remains committed to responsible growth, operational excellence, and delivering enduring value to all stakeholders.

Our Core Values

Guided by the 3T3P philosophy, HRPTL remains committed to responsible growth, operational excellence, and delivering enduring value to all stakeholders.

Six values that guide how we work, build trust, and grow together

3T

The 3 T's — How we relate to each other

Transparency

Openness and honesty for shared success. We communicate clearly and share information freely, so every stakeholder can trust what we say and do.

Trust

Empower ownership without micromanagement. We give people the confidence and space to take decisions, own outcomes, and grow into their roles.

Teamwork

Combine diversity to achieve more. We bring together different perspectives, skills, and backgrounds to solve problems no single person could solve alone.

3P

The 3 P's — How we deliver results

Passion

Relentless dedication to achieving goals. We bring energy and commitment to everything we do, pushing past obstacles to deliver on what we set out to achieve.

Performance

Focused on results and high-quality outcomes. We hold ourselves to high standards and measure success by the impact and quality of what we deliver.

Partnership

Sustainable and long-term growth. We build relationships with customers, suppliers, and communities that are built to last, not just to close a deal.

3T3P is the operating code behind every decision at HRPTL — from the shop floor to the boardroom, shaping how we build a sustainable future together.

Our Global and National Presence

HRPTL operates 11 state-of-the-art manufacturing plants across India and 14 international warehouses spanning across 7 countries, delivering 135 million+ parts annually to 55+ blue-chip OEMs and Tier-1 customers across 17 countries.

Our Product Portfolio

Our product portfolio spans over 1,500 products across 100+ categories, covering every critical automotive sub-system. HRPTL offers a diversified range of precision-engineered automotive components across five key product categories: Steering, Transmission & Powertrain, Engine & Exhaust, Differential Parts, and Constant Velocity Joints (CVJs). Its products include steering shafts and joints, axle and transmission components, crankshafts, connecting rods, differential gears and cases, and CVJ components, including products for EV powertrain applications. The portfolio serves a broad range of vehicle segments, including Passenger Vehicles, Light Commercial Vehicles, Heavy Commercial Vehicles, and Other Applications such as off-highway equipment, enabling Highway Roop to address diverse mobility and drivetrain requirements.

Light Commercial Vehicle

Heavy Commercial Vehicle

Other Applications

Our offerings include steering yokes (both cold/hot and ferrous/non-ferrous forging, and sheet metal), steering joints, slip shaft assemblies, I-shaft assemblies, steering columns, differential housings, steering gearbox housings, axle drive shafts, and other mission-critical automotive components etc. We supply both traditional Internal Combustion Engine (ICE) and rapidly growing Electric Vehicle (EV) platforms, delivering 135 million+ parts annually across our global customer base.

Core Product Categories

Steering

We manufacture precision-engineered steering components designed to deliver superior control, stability, and safety in automotive systems. Developed to meet demanding performance standards and contribute toward enhanced driving efficiency and vehicle reliability.

KEY PARTS MANUFACTURED

Steering columns, I-shafts, universal joints and slip shaft assemblies, yokes, key lock collars and lock nut, input shafts, tie rod end, outer ball joints, steering pinion, ball nuts, single piece shaft yoke and yoke tube.

Transmission and Powertrains

HRPTL offers a wide range of transmission and powertrain components engineered to support efficient power transfer, performance optimisation, and vehicle reliability. Manufactured with high precision to meet evolving automotive performance requirements.

KEY PARTS MANUFACTURED

Axle shafts (input, output and intermediate shafts), front axle shafts, stub shafts, spindle shafts, propeller yokes, flanges, hub, transmission shafts, rotor shafts (EVs).

Engine and Exhaust

Our engine and exhaust components are engineered to support performance, efficiency, and operational reliability in automotive applications. Designed to withstand demanding operating environments and enhance emission system effectiveness.

KEY PARTS MANUFACTURED

Crank shaft, con rod, crank shaft assembly, kick starter shaft, high Si-Mo exhaust flanges.

Differential Parts

The Company produces high-quality differential components that enable effective torque distribution and smooth vehicle operation. Designed for durability and precision, these components play a critical role in enhancing drivetrain performance and operational efficiency.

KEY PARTS MANUFACTURED

Bevel gear sets, differential case assemblies, pinion and spiders.

Constant Velocity Joints

We manufacture constant velocity (CV) joint components that enable smooth torque transmission and operational flexibility across varying driving conditions. Precision engineering and quality assurance ensure enhanced durability, reliability, and vehicle performance.

KEY PARTS MANUFACTURED

Fixed outer race bell, tulip and bell.

Quality & Innovation at HRPTL

Quality and innovation define HRPTL's manufacturing excellence. The Company combines robust quality management systems, advanced inspection technologies, end-to-end product traceability, and world-class testing facilities to deliver precision-engineered components with customer quality levels below 5 PPM. A strong R&D and design ecosystem, backed by advanced engineering software, simulation tools, and continuous improvement practices such as 5S, Kaizen, and Quality Circles, drives ongoing gains in product performance, manufacturing efficiency, process innovation across the company's global operations.

Quality Excellence

At HRPTL, quality is not merely a function, it is a fundamental principle embedded across our products, processes, and culture. Our commitment to engineering excellence translates into precision-engineered components that consistently meet the exacting standards of leading global OEMs and Tier-1 customers.

Our integrated manufacturing operations are supported by robust quality management systems, advanced inspection technologies, and standardised processes that ensure consistency, reliability, and product performance at every stage. We have sustained customer quality levels below 5 parts per million (PPM) for three consecutive years and continues to work towards a long-term objective of zero-defect manufacturing.

End-to-End Product Traceability

Every component is tracked across its manufacturing lifecycle through advanced identification systems, including Data Matrix Codes (DMC), heat code traceability, and laser marking. This end-to-end traceability strengthens quality assurance, enables rapid issue resolution, and enhances customer confidence.

Our manufacturing facilities operate state-of-the-art quality laboratories and metrology centres, equipped with 3D Coordinate Measuring Machines (CMMs), Vision Measuring Machines (VMMs), contour tracers, spline checking systems, chemical analysis equipment, hardness testers, and metallurgical testing facilities, enabling rigorous quality validation at every stage of the manufacturing.

Continuous improvement is central to our quality philosophy. Initiatives such as 5S, Kaizen, Quality Circles, focused improvement teams, and cross-functional knowledge sharing enable a culture of operational excellence and innovation across our facilities. A centralised team of quality experts standardises best practices, strengthens process capabilities, enhance operational efficiency, develop talent, and drive continuous improvement, making quality a defining characteristic of every product HRPTL delivers.

Technology

Our integrated manufacturing ecosystem spans forging, stamping, precision machining, heat treatment, surface coating, assembly, and testing, supported by automation, digital manufacturing, and process optimisation. We continuously invest in technology upgrades, advanced equipment, and digital solutions. This strengthens productivity, product quality, resource utilisation, and overall operational efficiency.

Innovation remains a key enabler of our sustainable growth. By integrating engineering excellence with responsible manufacturing practices, we focus on developing more efficient production processes, reducing material and energy consumption, and improving product reliability, all in support of the automotive industry's transition towards a low carbon, sustainable future. Through continuous improvement and technology-driven innovation, HRPTL remains committed to delivering value for customers while building a future-ready manufacturing enterprise.

Advanced capabilities at HRPTL

01

FORGING AND STAMPING

HRPTL's advanced forging and stamping capabilities form the backbone of its precision manufacturing operations. Equipped with robust manufacturing infrastructure and process expertise, the Company produces high-strength, dimensionally accurate components designed to meet stringent performance and durability requirements of the automotive industry while ensuring operational efficiency and material optimization.

HEAT TREATMENT

The Company employs specialized heat treatment technologies to enhance the mechanical properties, strength, durability, and wear resistance of critical automotive components. Through controlled thermal processing and quality assurance mechanisms, HRPTL ensures superior metallurgical performance and product reliability across demanding operating conditions.

02

03

MACHINING

HRPTL's precision machining capabilities are supported by advanced CNC and automated manufacturing systems that enable high dimensional accuracy, repeatability, and process consistency. The Company focuses on delivering precision-engineered components that meet stringent customer specifications and global quality standards.

COATING / SURFACE TREATMENT

To improve product durability and performance, HRPTL leverages advanced coating and surface treatment technologies that enhance corrosion resistance, wear protection, and component longevity. These processes contribute significantly toward improving operational performance and product life cycle efficiency.

04

05

TESTING

Quality and reliability remain integral to HRPTL's manufacturing philosophy. The Company undertakes comprehensive testing and validation processes to ensure products meet customer expectations, regulatory standards, and performance specifications through rigorous inspection, quality control, and process monitoring mechanisms.

ASSEMBLY

HRPTL's integrated assembly capabilities enable seamless manufacturing of complex automotive systems and components with precision, efficiency, and quality assurance. By integrating advanced production techniques and process controls, the Company ensures optimized performance, consistency, and timely delivery.

06

Innovation, R&D and Design

HRPTL drives innovation through skilled R&D, design engineering, and unique problem-solving methodologies, focused on developing groundbreaking products and processes, rigorously evaluating outcomes, and resolving identified issues through its own proprietary approaches.

The engineering expertise is matched by cutting-edge design and simulation capability. Leveraging 3D modelling, Computer-Aided Engineering (CAE) based design optimisation, material characterisation, precision tooling, prototyping, and digital process optimisation, HRPTL delivers high-performance forging solutions while strengthening product quality, manufacturing efficiency, cost-effectiveness, and speed to market.

Highlights from the R&D and Design Area

Unmatched product development expertise
for innovation-inspired designs.

Integration of 3D model simulation
for optimised size, weight, and enhanced performance of each forging

Use of advanced CAE techniques
for design optimisation and applied analysis

Well-thought use and characterisation
of material properties

Optimal tooling and fabrication
for serial production

Design engineers fulfil delivery beyond expectations
right from build to print, to prototyping, and reverse engineering

Forgings engineered for increased production speed,
precise accuracy, and exceptional cost-effectiveness driven by practicality

Utilising cutting-edge software
for offline part development, optimising forging processes and raw materials, and enhancing press and die utilisation

Stakeholder Engagement and Materiality Analysis

Strong stakeholder relationships are essential to understanding expectations, addressing key concerns, and creating long-term value. Through continuous dialogue and regular engagement, HRPTL integrates stakeholder perspectives into decision-making, reinforcing its commitment to responsible and sustainable growth.

Stakeholders are identified based on their level of influence on, and impact across the company's operations and value chain. HRPTL's stakeholder ecosystem spans both internal and external stakeholder groups, including employees and workers, customers, suppliers and vendors, regulatory authorities, and local communities, each playing a critical role in the company's long-term success and sustainability journey. The stakeholder mapping process is reviewed periodically to remain aligned with evolving business dynamics, stakeholder expectations, and emerging ESG priorities.

HRPTL's engagement approach is two-way and inclusive, enabling open dialogue that builds trust and surfaces ground-level insights. Engagements are conducted through channels suited to each stakeholder group, spanning formal and informal modes. Outcomes and key concerns gathered through these interactions are consolidated and presented periodically to senior management and the Board, ensuring stakeholder feedback directly influence strategic planning.

Through consistent, multi-level interactions, we gain insights into stakeholder concerns and emerging priorities, allowing us to shape responses that generate lasting value.

Feedback and Grievance Redressal

We maintain structured mechanisms for stakeholder feedback and grievance redressal across our operations, including centralised systems for complaints and escalation processes. Input received through these channels are reviewed by relevant teams to enable timely resolution, corrective actions, and continuous improvement. We have established a formal grievance redressal policy accessible to all stakeholders through our intranet.

For value chain stakeholders, a dedicated Ethics Escalation & Whistle-Blower Policy provides a structured, confidential channel to raise concerns.

Stakeholder Engagement Process

Engaging Key Stakeholders Across Our Value Chain

INTERNAL STAKEHOLDERS

Employees and Workers

Our people are at the core of everything we do. We are committed to their well-being, growth, and creating a safe and inclusive workplace.

EXTERNAL STAKEHOLDERS

Local Communities

We engage with local communities to understand their needs and contribute to their sustainable development.

OEM Customer

We collaborate closely with OEMs to deliver quality products and innovative solutions that create value.

Suppliers, Vendors, Distributors and other Value Chain Partners

We build strong and ethical partnerships to ensure a resilient, responsible and sustainable value chain.

Government and Regulators

We engage proactively with government bodies and regulators to ensure compliance and support policy development.

Customers

OUR COMMITMENT

Ensure customer needs, product quality, reliability, competitive pricing, innovation, responsiveness, and adherence to quality and sustainability standards are understood and addressed.

COMMUNICATION CHANNEL

- Meetings
- Emails
- Mass media; Digital communication

PURPOSE OF ENGAGEMENT

Initiative-taking and responsive communication to understand requirements, address concerns promptly, and nurture partnerships grounded in quality and reliability.

Suppliers & Vendors

OUR COMMITMENT

Promote fair, transparent and responsible sourcing, ensure timely payments, ethical conduct, and strengthen long-term supplier relationships.

COMMUNICATION CHANNEL

- Emails
- Telephonic Calls
- Meetings between suppliers and vendors

PURPOSE OF ENGAGEMENT

Structured onboarding, performance evaluation, and continuous improvement to build long-term relationships and promote ethical sourcing across the value chain.

Employees / Workers

OUR COMMITMENT

Ensure a safe, inclusive and supportive workplace with fair compensation, equal opportunities, skill development, career growth, and employee well-being.

COMMUNICATION CHANNEL

- Emails
- Meetings
- HRMS Portal
- Conferences
- Discussions

PURPOSE OF ENGAGEMENT

Structured learning, role-specific training, and regular engagement to foster a motivated, skilled, and safe workforce.

Local Communities

OUR COMMITMENT

Understand community needs and contribute to inclusive development, environmental stewardship, and positive social and environmental outcomes.

COMMUNICATION CHANNEL

- Annual Reports
- Newsletters
- Company Website
- Meetings

PURPOSE OF ENGAGEMENT

Initiative-taking and responsive communication to understand requirements, address concerns promptly, and nurture partnerships grounded in quality and reliability.

Regulatory Authorities

OUR COMMITMENT

Ensure compliance with applicable laws and regulations, transparent disclosures, environmental compliance, responsible business conduct, and adherence to statutory requirements.

COMMUNICATION CHANNEL

- Disclosures
- Official communication channels
- Emails
- Company Website
- Statutory Filings

PURPOSE OF ENGAGEMENT

Full compliance with applicable laws, timely filings, and engagement anchored in transparency, initiative-taking disclosure, and strict adherence to statutory obligations.

Note: Engagement occurs as required based on the nature of interaction, stakeholder needs, or business context.

Materiality Assessment

HRPTL uses materiality assessment as a strategic tool to align its sustainability focus areas with both stakeholder expectations and broader business goals. Through this process, the company systematically identifies, assesses, and prioritises the environmental, social, and governance topics most relevant to its business.

This is HRPTL's first materiality assessment as an integrated entity, undertaken in FY 2025-26 to establish the baseline set of material topics that will guide the Company's sustainable strategy, disclosures, and risk management going forward. It also forms the reference point against which future assessments will be tracked, with subsequent reviews building on this baseline to reflect changes in the business, regulatory landscape and stakeholder expectations over time.

Materiality Assessment Methodology

The materiality assessment began with a sustainability landscape review, including an assessment of relevant material topics, GRI and leading ESG rating frameworks, along with benchmarking of industry peers. The findings were consolidated into a comprehensive list of potential material topics, which were then prioritised based on stakeholder inputs, business relevance and industry best practices.

The prioritisation phase involved identifying key internal and external stakeholders and gathering their perspectives through interviews, surveys and one-on-one discussions. Stakeholder feedback was consolidated into a materiality matrix, followed by leadership validation and strategic alignment. The final material topics were assessed for their relevance across operations and the value chain, supporting stakeholder value and sustainable business growth.

Materiality Matrix

The materiality analysis identified and prioritised 13 material topics across the ESG dimensions, based on stakeholder perspectives, business relevance, operational impacts and value-chain considerations. The resulting materiality matrix plots each topic against impact on business and impact on stakeholders, with topics colour-coded by ESG pillar.

Topics positioned within the Critical Priority Area represent the highest combined significance for HRPTL and its stakeholders and therefore receive greater management attention, while topics within the High and Medium Priority Areas are managed and monitored in line with their relative significance.

Connecting Our ESG Agenda with Global Goals

The table below presents the alignment of HRPTL's material ESG topics with the relevant Sustainable Development Goals (SDGs), highlighting how the Company's key sustainability priorities contribute to the broader global sustainability agenda. This alignment provides a clear link between identified material impacts and the SDGs, helping demonstrate the Company's contribution to sustainable development, strengthen the strategic relevance of its ESG initiatives, and provide stakeholders with a clear understanding of how its sustainability priorities support globally recognised goals.

It also enables HRPTL to connect its sustainability efforts with specific global priorities, facilitating more focused planning and implementation of ESG initiatives. By mapping material topics to the SDGs, the Company can better track its contribution to areas such as climate action, responsible resource use, decent work, community development and strong governance. The alignment further enhances the transparency and consistency of sustainability disclosures by providing a recognised framework for communicating the broader impact of the Company's initiatives. Overall, the SDG mapping helps translate HRPTL's material sustainability priorities into a broader development context, demonstrating how responsible business practices contribute to long-term sustainable growth.

S.No.	Criticality	Material Topic	Pillar	SDG Alignment
1	Critical	Climate Change, Energy And Emission Management	Environment	
2	Critical	Employee Health, Safety And Well-Being	Social	
3	Critical	Product Quality & Safety	Social	
4	High	Water Management	Environment	
5	High	Human Capital Management	Social	
6	High	Human Rights & Labour Practices	Social	
7	High	CSR And Community Development	Social	
8	High	Business Ethics & Transparency	Governance	
9	High	Corporate Governance	Governance	
10	High	Stakeholder Engagement	Governance	
11	Moderate	Waste Management	Environment	
12	Moderate	Responsible Supply Chain & Supply Chain Management	Governance	
13	Moderate	Risk Management	Governance	

Material Topics: Risk, Rationale & Response

HRPTL's material topics have been identified through a structured materiality assessment that considers stakeholder expectations, industry trends, regulatory requirements, and the Company's operational context. These topics represent the ESG issues most relevant to our business and most significant to our stakeholders, spanning environmental stewardship, social responsibility, and governance excellence.

For each material topic, this section outlines the associated risk it poses to the business, the rationale for its relevance to HRPTL's operations and value chain, and the response the strategies, systems, and initiatives in place to manage it responsibly. This risk-rationale-response framework reflects our commitment to proactive, transparent management of the issues that matter most, and forms the foundation of our broader sustainability strategy.

ENVIRONMENT

CLIMATE CHANGE, ENERGY AND EMISSION MANAGEMENT

 RISK	Rising energy consumption and GHG emissions may increase operational costs, regulatory compliance requirements, and stakeholder scrutiny while impacting climate commitments.
 RATIONALE	Automotive component manufacturing is energy-intensive and contributes to GHG emissions through electricity consumption and fuel use. Efficient energy management is essential to improve operational efficiency, reduce environmental footprint, and meet evolving stakeholder and regulatory expectations.
 RESPONSE	Implement energy-efficient technologies, renewable energy adoption, emission monitoring systems, decarbonisation initiatives, climate risk assessments, and energy conservation programmes aligned with sustainability goals.

WATER MANAGEMENT

 RISK	Inefficient water use or improper wastewater management can increase resource costs, affect local water availability, and lead to regulatory non-compliance.
 RATIONALE	Water is an important resource supporting manufacturing processes, utility operations, and employee welfare. Efficient water management contributes to resource conservation and responsible operations.
 RESPONSE	Implement water recycling, consumption monitoring, and infrastructure maintenance programmes.

WASTE MANAGEMENT

 RISK	Improper waste handling or disposal can lead to environmental contamination, regulatory penalties, increased disposal costs, and adverse community impacts.
 RATIONALE	Manufacturing activities generate metal scrap, packaging waste, used oil, and other waste streams, making effective waste management important for operational efficiency, environmental stewardship, and compliance.
 RESPONSE	Promote waste reduction, recycling, resource recovery, and ensure compliant waste collection, storage, and disposal practices.

SOCIAL

EMPLOYEE HEALTH, SAFETY AND WELL-BEING

 RISK	Workplace injuries, machine-related accidents, or exposure to noise, dust, and chemicals can lead to lost workdays, legal liabilities, compensation costs, reduced productivity, and reputational impacts.
--	--

 RATIONALE	HRPTL's manufacturing operations involve machining, forging, assembly, material handling, and the use of industrial equipment, making employee health and safety critical to ensuring a safe workplace, operational continuity, and regulatory compliance.
 RESPONSE	Strengthen OHS systems, safety audits, PPE compliance, training, and health monitoring programmes.

HUMAN CAPITAL MANAGEMENT

 RISK	Skill gaps, high attrition, and inadequate employee development can affect productivity, product quality, operational efficiency, and business growth.
 RATIONALE	The manufacture of precision automotive components requires a skilled workforce capable of maintaining quality, productivity, operational excellence, and continuous improvement.
 RESPONSE	Invest in training and development programmes, leadership development, performance management systems, employee engagement initiatives, succession planning, and talent retention strategies.

HUMAN RIGHTS AND LABOUR PRACTICES

 RISK	Non-compliance with labour standards may result in workforce dissatisfaction, legal penalties, supply chain disruptions, and reputational risks.
 RATIONALE	HRPTL's success depends on maintaining a productive, motivated, and fairly treated workforce while ensuring responsible labour practices across its operations and value chain.
 RESPONSE	Conduct supplier assessments, maintain grievance redressal mechanisms, implement human rights and labour policies, employee awareness programmes, code of conduct compliance, and periodic audits.

CSR & COMMUNITY DEVELOPMENT

 RISK	Limited community engagement may affect stakeholder trust and the Company's social licence to operate, while targeted initiatives create positive social impact.
 RATIONALE	HRPTL operates within local communities and recognises the importance of contributing to social development and fostering positive relationships with surrounding stakeholders.
 RESPONSE	Implement community development initiatives focused on education, healthcare, skill development, and local stakeholder engagement.

PRODUCT QUALITY AND SAFETY

 RISK	Product defects, quality failures, or non-conformance can result in customer complaints, product recalls, warranty claims, revenue loss, and damage to customer trust.
 RATIONALE	As a supplier to automotive OEMs and aftermarket customers, maintaining high standards of product quality, reliability, and safety is fundamental to customer satisfaction, compliance, and long-term business success.
 RESPONSE	Strengthen quality management systems, process controls, product inspections, automation, customer feedback mechanisms, and continuous improvement programmes.

GOVERNANCE

STAKEHOLDER ENGAGEMENT

 RISK	Ineffective stakeholder engagement may result in unresolved concerns, reduced trust, customer dissatisfaction, and reputational challenges.
 RATIONALE	Regular engagement with employees, customers, suppliers, regulators, and communities helps HRPTL understand stakeholder expectations and strengthen business relationships.
 RESPONSE	Conduct regular stakeholder consultations, customer and supplier interactions, employee engagement forums, grievance redressal mechanisms, and transparent communication practices.

RISK MANAGEMENT

 RISK	Unidentified or poorly managed risks can lead to production disruptions, financial losses, compliance violations, business interruptions, and reputational damage.
 RATIONALE	HRPTL operates in a dynamic business environment exposed to operational, financial, regulatory, market, and supply chain risks, making effective risk management critical to business resilience and continuity.
 RESPONSE	Strengthen risk assessment, mitigation planning, business continuity measures, and periodic risk reviews.

RESPONSIBLE SUPPLY CHAIN AND SUPPLY CHAIN MANAGEMENT

 RISK	Supplier quality issues, delivery delays, ethical non-compliance, or raw material shortages can disrupt production schedules, increase costs, and affect customer commitments.
 RATIONALE	The Company's operations depend on a reliable network of suppliers providing raw materials, components, and services. Responsible supply chain management is essential for maintaining quality, continuity, and sustainable sourcing practices.
 RESPONSE	Conduct supplier assessments, implement sustainable procurement practices, monitor supplier performance, and strengthen supply chain due diligence.

CORPORATE GOVERNANCE

 RISK	Weak governance practices may lead to ineffective decision-making, compliance failures, operational risks, and reduced investor confidence.
 RATIONALE	Strong governance practices support effective oversight, strategic decision-making, risk management, and accountability, enabling sustainable business growth and long-term value creation.
 RESPONSE	Strengthen board oversight, risk management systems, policy frameworks, internal audits, compliance reviews, and governance reporting mechanisms.

BUSINESS ETHICS AND TRANSPARENCY

 RISK	Instances of unethical conduct, corruption, or inadequate disclosures may result in legal consequences, reputational damage, and loss of stakeholder confidence.
 RATIONALE	Operating in a highly regulated and competitive industry requires HRPTL to uphold ethical business practices, transparency, and compliance to maintain stakeholder trust and corporate credibility.
 RESPONSE	Enforce ethical business practices, compliance monitoring, and whistleblower mechanisms.

Our Governance, Ethics and Accountability

"Governing with Integrity, Delivering with Accountability"

UN SDG Alignment

At HRPTL, strong governance is the foundation of sustainable and responsible business growth. Our governance framework ensures accountability, transparency, ethical conduct, and effective risk management across all levels of the organisation. Robust oversight mechanisms, clearly defined policies, and stakeholder-focused decision-making underpin our commitment to creating long-term value for shareholders, customers, employees, and the communities we serve.

Our Material Governance Topics

Stakeholder Engagement	Business Ethics & Transparency	Corporate Governance	Supply Chain Management	Risk Management
-------------------------------	---	-----------------------------	--------------------------------	------------------------

Corporate Governance

At HRPTL, corporate governance is guided by our 3T3P core values - Transparency, Trust, Teamwork, Passion, Performance, and Partnership - which shape how we conduct business and engage with our stakeholders. We uphold the highest standards of ethics, integrity, accountability, and regulatory compliance, building a culture of openness, collaboration, and responsible decision-making. Our governance framework enables effective oversight, proactive risk management, and sustainable value creation, building trust with our customers, employees, investors, suppliers, and communities.

Our Corporate Governance Structure

Effective corporate governance at HRPTL is rooted in the strength, experience, and strategic guidance of the Board of Directors, the Company's highest governance body. The Board, chaired by Mr. Mohit Oswal (Chairman and Non-Executive Director), plays a pivotal role in shaping the Company's growth trajectory, ensuring effective execution, and safeguarding stakeholder interests. It monitors management performance and guides long-term value creation through integrated business strategies that encompass financial growth alongside sustainability initiatives and social impact considerations. By embedding environmental, social, and governance (ESG) principles into its decision-making framework, the Board fosters responsible stewardship and resilience across the organisation.

Nomination of Board Members

The Company's Nomination and Remuneration Committee (NRC) is responsible for identifying, evaluating, and recommending candidates for appointment to the Board, ensuring nominees bring the skills, experience, and independence needed to support HRPTL's strategic priorities. The Committee reviews the Board's size and composition, assesses the balance of executive, non-executive, and independent directors, and evaluates candidates against criteria that include industry experience, functional expertise across manufacturing, finance, technology, and governance, and the ability to contribute to long-term value creation.

Independent directors are appointed in line with applicable regulatory requirements and are expected to bring objective, independent oversight to Board deliberations. Once appointed, Board members are subject to periodic performance evaluation, covering both individual contribution and collective Board effectiveness, supported by structured orientation and ongoing training to keep pace with evolving regulatory, business, and sustainability requirements.

Board effectiveness is further strengthened through regular interactions with senior management and Business Heads, performance evaluations, training, and stakeholder engagement to address evolving business needs. This nomination process promotes a balanced mix of skills, perspectives, and experiences essential for resilient governance as HRPTL prepares for its next phase of growth, including its path toward public markets. The Board remains committed to harmonising business strategies with evolving sustainability-related demands and stakeholder expectations.

Board Committees

Audit Committee

The Audit Committee assists the Board in overseeing the integrity of financial reporting, the effectiveness of internal controls, risk management processes, statutory compliance, and the independence and performance of auditors. The Committee plays a key role in promoting transparency, accountability, and sound corporate governance across the organization.

KEY RESPONSIBILITIES

- Review financial statements and related disclosures before submission to the Board.
- Monitor the effectiveness of internal financial controls, audit processes, and risk management systems.
- Oversee the appointment, independence, and performance of statutory and internal auditors.
- Review related-party transactions and ensure compliance with applicable regulations.
- Evaluate audit findings and management responses to strengthen governance and control mechanisms.

The Committee meets periodically during the year and at least four times annually, or more frequently as required to discharge its responsibilities effectively.

CSR Committee

The CSR Committee provides strategic direction and oversight for the Company's Corporate Social Responsibility initiatives. It ensures that CSR activities are aligned with statutory requirements, community needs, and the Company's commitment to creating sustainable social impact.

KEY RESPONSIBILITIES

- Formulate and recommend the CSR Policy to the Board.
- Recommend annual CSR expenditure and monitor the utilization of CSR funds.
- Review, evaluate, and monitor the implementation of approved CSR projects and programs.
- Recommend the annual CSR Action Plan and monitor progress against defined objectives.
- Assess the impact and effectiveness of CSR initiatives and recommend improvements where required.
- Ensure compliance with applicable provisions of the Companies Act, 2013 and CSR Rules.

The Committee meets periodically during the year and as often as necessary to review CSR performance, monitor project implementation, and discharge its responsibilities effectively.

ESG Committee

The ESG & Sustainability Committee assists the Board in overseeing the Company's sustainability strategy, ESG performance, and responsible business practices. Led by the CEO/CSO, the committee provides guidance on integrating environmental, social, and governance considerations into business operations, supporting long-term value creation and sustainable growth.

KEY RESPONSIBILITIES

- Review and monitor the Company's ESG strategy, priorities, targets, and performance.
- Oversee sustainability-related initiatives, including energy efficiency, emissions reduction, resource conservation, workplace safety, and employee well-being.
- Evaluate emerging ESG risks and opportunities, including risks, regulatory developments, and stakeholder expectations.
- Monitor sustainability disclosures, ESG reporting, and alignment with applicable frameworks, standards, and regulatory requirements.

The Committee meets periodically during the year, or as required, to review ESG performance, monitor sustainability initiatives, and guide the Company's sustainability agenda.

Sustainability Governance

At HRPTL, sustainability is embedded into the Company's governance framework and strategic decision-making, reflecting its commitment to responsible growth and long-term value creation. This strategy is structured around three core priorities - Preserve (Environment), Empower (People & Community), and Transform (Ethics & Governance), which guide our actions towards creating sustainable value for our stakeholders, society, and the environment. The CXOs provide oversight on these priorities, ensuring that sustainability considerations are integrated into business strategy, risk management, and operational decision-making.

The CXOs are supported by Plant Heads and ESG Coordinator in driving the implementation of sustainability initiatives, monitoring ESG performance, ensuring compliance with applicable regulatory requirements, and strengthening stakeholder engagement. Regular reviews of key sustainability priorities enable the Company to identify emerging risks and opportunities, track progress against its commitments, and integrate responsible business practices across its operations and value chain.

A robust governance framework and clear accountability enable HRPTL to strengthen its sustainability performance, enhance organisational resilience, and create lasting value for its stakeholders while advancing its long-term business objectives.

ESG Governance Structure

At HRPTL, an ESG Committee has been constituted for oversight and decision-making on sustainability matters, with our CEO, Mr. Dharmesh Arora designated as Chief Sustainability Officer (CSO) to drive HRPTL's ESG agenda. This structure is further supported by CXOs, ESG Coordinator, Plant Heads and ESG Leads as representatives ensuring effective implementation and monitoring across operations. The Committee periodically reviews ESG performance, compliance, and improvement opportunities, escalating key outcomes to the CSO, creating a continuous feedback loop from plant-level implementation to corporate review to CSO oversight, keeping ESG integral to decision-making and ensuring risks and opportunities are addressed in a timely manner.

CXO-Level Leadership

HRPTL's sustainability agenda is guided by CSO, who provides strategic direction and oversees ESG integration with the Company's growth strategy and stakeholder expectations, while driving long-term sustainability priorities and responsible business practices.

The COO drives the implementation of sustainability priorities across operations, resource efficiency, and responsible business practices, ensuring that sustainability objectives are effectively translated into operational initiatives and performance.

Other CXOs embed ESG priorities within their respective functions and support their effective implementation, while monitoring relevant performance and contributing to the Company's overall sustainability objectives.

Functional & Operational Management

The ESG Coordinator acts as a central anchor for sustainability management, facilitating ESG planning, monitoring key material priorities, coordinating cross-functional engagement, operational implementation and strategic alignment.

Plant Heads serve as key custodians of sustainability implementation across manufacturing facilities, acting as the operational bridge between strategic intent and on-ground execution. They are responsible for driving environmental, health & safety, operational efficiency, and compliance-related initiatives at plant locations.

Supporting plant-level implementation are dedicated ESG Leads, who coordinate sustainability performance monitoring, data management, regulatory compliance, ESG reporting, and implementation of environmental and social initiatives. ESG Leads work closely with Plant Heads to track key performance indicators, identify opportunities for improvement, and strengthen sustainability integration into day-to-day operations.

Execution & Implementation Team

Functional Heads embed sustainability into operational processes and business functions. Departments including operations, EHS, human resources, procurement, finance, quality, maintenance, supply chain, and administration contribute to HRPTL's ESG priorities through function-specific responsibilities and performance monitoring.

Functional teams support the implementation of initiatives related to energy efficiency, emissions reduction, water stewardship, waste management, occupational health & safety, employee well-being, responsible supply chain practices, business ethics, and community development. Through continuous engagement across functions and facilities, HRPTL ensures consistent implementation, accountability, and measurable progress.

Sustainability Governance Framework

At HRPTL, sustainability governance is anchored in a structured and collaborative framework that enables effective oversight, accountability, and implementation across all organisational levels. HRPTL continues to strengthen an integrated governance model that embeds sustainability priorities into business strategy, operational excellence, and long-term value creation.

HRPTL's sustainability governance structure enables effective decision-making, stronger stakeholder accountability, and timely implementation of ESG priorities through defined roles, structured oversight, and periodic reviews. Guided by the Company's Sustainability Policy and overseen by the ESG Committee, HRPTL integrates sustainability considerations across a three-tier governance framework, embedding ESG priorities into strategic oversight, operational management, and functional execution.

Strategic pillars of Sustainability

Preserve

We are committed to protecting the environment by improving resource efficiency, reducing emissions, conserving water, and promoting responsible waste management practices. Through continuous innovation and operational excellence, we strive to minimise our environmental footprint while supporting a low-carbon and resource-efficient future.

FOCUS AREAS

- ⚡ Climate change, energy and emissions management
- 💧 Water stewardship
- ♻️ Waste management and circularity

Empower

We believe that our people and communities are central to our success. We aim to foster a safe, inclusive, and engaging workplace while contributing to the social and economic development of the communities where we operate.

Business Ethics and Integrity

At HRPTL, ethical conduct is not merely a policy requirement; it is a foundational value that shapes every decision. Sustainable business growth is achieved when trust, transparency, and integrity are embedded across all levels of our operations. This governance framework is guided by a comprehensive set of policies that establish clear standards for ethical conduct, responsible business practices, accountability, and compliance. Together, these policies guide employees, leadership, suppliers, and other stakeholders in maintaining consistent and accountable practices across the Company.

Policies and Codes

At HRPTL, the governance framework is built on a comprehensive set of policies that guide conduct, decision-making, and operations across all levels of the organization. These policies uphold the highest standards of integrity, transparency, and accountability and are approved by the Board, the highest authority responsible for their implementation and oversight. All policies have been translated into procedures and are actively communicated across the organisation. Select policies also extend to value chain partners, reinforcing HRPTL's commitment to responsible and ethical business practices beyond our own operations.

Our Key Policies

HRPTL has established a comprehensive suite of policies that provide the foundation for responsible decision-making and ethical business conduct. Guided by our 3T3P core values, these policies define clear expectations, promote regulatory compliance, and reinforce our commitment to integrity, accountability, and sustainable value creation across the organization.

All policies are accessible to employees through the Company's intranet, while select policies are also available publicly on the Company's website at: <https://roop.highwayroop.com/roop-policies/>. These policies cover a wide range of areas aligned with globally recognised standards and industry benchmarks. A few of our key policies are mentioned below:

 POLICIES AVAILABLE ON COMPANY'S WEBSITE
1  Code of Conduct
2  Business Code of Conduct
3  Anti Bribery Policy
4  Anti Corruption Policy
5  Ethics Escalation and Whistle Blower Policy
6  People Policy
7  Prevention of Sexual Harassment (PoSH) Policy
8  Occupational Health and Safety Policy
9  Environmental Policy
10  Quality Policy
11  Data Protection and Retention Policy
12  Information Security Policy

 FEW POLICIES AVAILABLE ON COMPANY'S INTRANET
1  Non-Discrimination and Harassment Policy
2  Sustainability Policy
3  Human Rights Policy
4  Grievance Redressal Policy
5  People Policy
6  Women Rights Policy
7  Modern Slavery Policy
8  No Child Labour Policy
9  Diversity, Equity, Inclusion & Belongingness Policy

These policies are periodically reviewed and revised to align with changing regulatory requirements, stakeholder expectations, and emerging global best practices. Through this strong governance framework, HRPTL strengthens stakeholder confidence, promote sustainable development, and enable long-term value creation.

Anti-Bribery, Anti-Corruption & Conflict of Interest

At HRPTL, integrity, transparency, and ethical conduct form the foundation of business practices. We maintain a zero-tolerance approach towards bribery, corruption, facilitation payments, kickbacks, and all forms of unethical business practices. Our Anti-Bribery and Anti-Corruption Policy reinforce our commitment to conducting business with integrity, transparency, and accountability, while ensuring compliance with applicable laws and regulations.

To promote transparency and accountability, HRPTL maintains robust internal controls, accurate financial records, and a vigil mechanism through which employees and stakeholders can report concerns without fear of retaliation. Periodic training and awareness programmes reinforce ethical behaviour and compliance across the organisation.

HRPTL requires employees to avoid actual or potential conflicts of interest and promptly disclose any such conflict to their HOD, Plant Head, HR, or through the Ethics Helpline. Employees are expected to act in the Company's best interests and refrain from activities that may create conflicts, including accepting improper personal benefits or gifts, misusing their position, maintaining undisclosed interests or relationships with suppliers, customers, business associates or competitors, or engaging in activities that may affect the Company's reputation. The policy also prohibits the appointment of related parties as consultants, advisors, agents, intermediaries, brokers, or representatives without appropriate disclosure. Proven cases of conflict of interest may result in termination of employment.

Zero

Complaints were received in relation to issues of Conflict of Interest of Directors and KMPs

Whistleblower Mechanism

The policy emphasises confidentiality, protection against retaliation and timely investigation. Reported cases are assessed and investigated by the Whistle Blower Committee, with appropriate corrective and disciplinary measures undertaken where violations are established. Corrective actions are intended to prevent recurrence, while significant compliance matters are escalated to the Audit Committee. The policy also requires periodic reporting of cases, maintains confidentiality of information, and prohibits retaliatory action against employees who raise concerns in good faith.

Grievance Redressal Mechanism

HRPTL's Grievance Redressal Policy provides a structured mechanism for employees to raise and resolve grievances in a prompt, fair and transparent manner. Employees may submit grievances through email, in person or in writing, with designated

The policy promotes timely resolution, accountability and confidentiality through regular review of pending grievances and secure record-keeping by HR. Grievances and related documentation are maintained confidentially, with records retained for two years following resolution. The policy is communicated to employees through the HR and is also extended to relevant business partners and external parties with whom the Company has contractual relationships.

The infographic illustrates the Grievance Mechanism process, centered around a circular hub labeled "GRIEVANCE MECHANISM" with a group of people icon. Four diamond-shaped segments radiate from the center, each representing a stage of the process:

- WHO CAN RAISE A CONCERN** (Top, teal diamond): Accompanied by a group of people icon. A box above states: "Employees, workers, contractors and other stakeholders can file a grievance." A dashed line below states: "Covers workplace issues, discrimination, harassment, forced labour, child labour and conduct-related concerns."
- REPORTING CHANNELS** (Right, dark blue diamond): Accompanied by a headset icon. A box to the right states: "Concerns can be raised through the reporting manager or the HR team." A dashed line below states: "Additional channels include designated helpline mechanisms, email, or in-person discussion."
- REVIEW PROCESS** (Bottom, blue diamond): Accompanied by a checkmark icon. A box below states: "All concerns are reviewed fairly, confidentially and impartially." A dashed line below states: "The Grievance Officer conducts weekly reviews of pending cases, tracking progress against resolution timelines."
- SAFEGUARD** (Left, blue diamond): Accompanied by a shield icon. A box to the left states: "Retaliation against anyone raising a concern in good faith is strictly prohibited." A dashed line below states: "All employees and workers receive training on human rights principles."

[illegible]

Data Privacy & Security

We have implemented a comprehensive Information Security Policy and Data Protection and Retention Policy that establishes the principles and framework for the secure handling, storage, and retention of information across all our operations. This policy

protects sensitive data, supports regulatory compliance, and facilitates secure information exchange both internally and with external stakeholders.

HRPTL is committed to collecting only the minimum personal data necessary for defined and lawful purposes; and any personal data collected from third parties is obtained with prior consent and defined retention timelines. The purposes, methods, storage limitations, and retention periods for personal data are governed by the Company’s consent framework, and the accuracy, integrity, confidentiality, and relevance of all personal data is actively maintained in line with processing objectives.

Where third-party suppliers or business partners are engaged for processing personal data on the Company’s behalf, contractual obligations for data protection are explicitly agreed upon, including through Supplier Data Processing Agreements. Joint processing arrangements with independent third parties are governed by clearly defined responsibilities in legally binding documents.

Data is retained in accordance with applicable legal requirements and business classification norms as per the Company’s Asset Register. Records maintained for IATF are retained as per customer requirements, and Infosec system records are maintained as per the master list under the Integrated Management System (IMS). Any data breach concerns or policy violations can be reported to our Grievance Officer (HR Head) at grievancecell@highwayroop.com.

IT Security Framework

Information security and data protection follow a structured approach. The Company is certified under ISO/IEC 27001:2022 and compliant with TISAX (Trusted Information Security Assessment Exchange) requirements, reflecting our commitment to maintaining resilient information security standards, particularly in the automotive supply chain.

HRPTL has also developed a comprehensive set of IT policies and governance frameworks to effectively identify, assess, and mitigate information security and data privacy risks. Our Information Security Policy commits to safeguarding all data received from customers, employees, suppliers, and other interested parties to ensure its confidentiality, integrity, and availability.

Key commitments under this framework include:

01

Protection of personal data of customers, employees, contract personnel, and other interested parties.

02

Compliance with applicable statutory, regulatory, and other information security requirements.

03

Protection against accidental, malicious, and fraudulent alteration or destruction of data.

04

Continual improvement of the performance of our Information Security Management System.

05

Adherence to security agreements with customers and other interested parties covering information assets and data processing.

The Chief Information Security Officer (CISO), is responsible for ensuring ongoing compliance with information security requirements. Security mechanisms to prevent personal data from being stolen, misused, or abused are deployed across HRPTL's systems and regularly assessed. All systems, services, and equipment used for data storage meet acceptable security standards, with the IT Manager accountable for this compliance. The Legal Affairs Department monitors changes to data protection laws and regulations, develops updated compliance requirements, and assists business departments in achieving their data governance objectives.

Supply Chain Management

A robust and reliable supply chain is integral to HRPTL's long term business success, with suppliers and business partners viewed as key contributors to operational excellence and sustainable growth. The Company integrates sustainability, ethical business practices, and responsible sourcing into its supply chain management approach- promoting transparency, environmental stewardship, regulatory compliance, and respect for human and labour rights across its supplier, and strengthening a resilient, responsible value chain.

Supplier screening and assessment

HRPTL follows a structured supplier evaluation and onboarding process to ensure its business partners align with the Company's quality, compliance, and responsible sourcing expectations. Prior to onboarding, suppliers undergo a comprehensive assessment covering technical capabilities, quality systems, regulatory compliance, and business reliability. The Company also encourages adherence to ethical business practices, environmental responsibility, and respect for human and labour rights through its procurement requirements. Regular supplier evaluations and performance reviews enable HRPTL to strengthen supplier relationships, manage supply chain risks, and drive continuous improvement across its supplier ecosystem.

Supplier screening and onboarding procedure

1

Supplier Identification

Potential suppliers identified based on business requirements such as new product development, capacity constraints, pricing, or performance of existing suppliers.

2

Initial Assessment

Suppliers undergo an initial evaluation covering quality management systems, manufacturing capability, financial stability, technical competence, logistics, and business continuity. ISO 9001 certification (or IATF 16949) is considered.

3

Supplier Audit & Approval

Qualified suppliers are audited by the Supplier Quality Assurance (SQA) team and rated based on predefined criteria. Suppliers meeting the required threshold are added to the approved vendor list, while others are not approved.

4

Procurement & Sample Approval

Approved suppliers receive RFQs, drawings, and customer specifications. Following commercial evaluation, purchase orders are issued, and production samples are inspected and approved before regular supplies.

5

Performance Monitoring

Supplier quality, delivery, and compliance are monitored through monthly scorecards. Suppliers with declining performance are required to submit corrective action plans, undergo re-audits, and are closely monitored.

6

Continuous Compliance

HRPTL ensures all purchased products and services comply with applicable statutory, regulatory, and customer-specific requirements, while periodic risk assessments support continuous improvement of the supply chain.

Supplier Sustainability & Quality Assessment

Beyond initial qualification, HRPTL's critical suppliers undergo a structured system audit that evaluates capability across the full spectrum of quality, process control, safety, environmental, and information security practices. Each supplier is rated Red, Yellow, or Green against both an overall score and a defined set of critical points, with Yellow- and Red-rated suppliers required to submit a corrective action plan and undergo re-audit. The Company further strengthens supplier capability through regular

performance monitoring, targeted development programmes, and collaborative improvement initiatives, maintaining a resilient, responsible, and high-performing supply chain.

Rating thresholds for suppliers

Dimensions covered in the Supplier System Audit

Key suppliers are monitored monthly via a Supplier Performance Report Card covering quality and delivery ratings. Delivery concerns trigger a formal CAR (Corrective Action Request)/8D (8 Disciplines Problem Solving) corrective-action process with the supplier. A supplier remaining in the Red category for three consecutive months requires a detailed action plan and a management-level review, with re-audit planned within three months.

Supplier Cluster Development Programme

HRPTL follows a structured supplier development and management process to strengthen supplier capabilities, enhance product quality, and ensure reliable supply.

The process begins with identifying and onboarding suppliers through defined evaluation criteria, followed by capability assessments, audits, and approval. Suppliers receive regular training on quality management, problem-solving methodologies, process controls, safety, and customer-specific requirements, while support is provided for implementing best practices such as 5S, Quality Control (QC) Tools, Problem Solving (8D), Production Part Approval Process (PPAP), Process Failure Mode and Effects Analysis (PFMEA), Advanced Product Quality Planning (APQP), Statistical Process Control (SPC), and Measurement System Analysis (MSA) and visual management.

Following implementation, supplier performance is continuously monitored through defined KPIs, periodic audits, management reviews, and corrective action tracking. HRPTL works closely with suppliers to improve quality, reduce defects, strengthen process controls, enhance safety and environmental awareness, and drive continuous improvement through initiatives such as quality circles, Kaizen, and cost optimisation. This collaborative approach enables suppliers to consistently meet quality, delivery, and customer requirements while building a robust and dependable supply chain.

Customer satisfaction

At HRPTL, our customers are at the core of our business. We are committed to delivering high-quality precision-engineered solutions that meet the evolving requirements of leading OEMs and Tier-1 suppliers. By focusing on product quality, reliability, and timely delivery, we aim to build long-term partnerships founded on trust and mutual growth. Backed by robust quality management systems and responsible business practices, the Company continuously engages with customers to understand their expectations, incorporate feedback into our processes, and resolve concerns promptly- enhancing customer satisfaction. Through robust quality management systems, responsible business practices, and a commitment to continuous improvement, we continuously work to resolve customer concerns promptly and deliver reliable, high-quality service that enhances customer satisfaction through a consistent commitment to continuous improvement.

HRPTL has established a structured mechanism for managing customer feedback, complaints, and engagement across its operations. Customer input is systematically recorded, evaluated, and addressed in a timely manner, while the insights gathered are used to drive continuous improvement in product quality, processes, and customer satisfaction.

CUSTOMER GRIEVANCE REDRESSAL

Intake	Complaints received via written or verbal channels
Recording	Centrally logged and routed to dedicated customer representatives
Ownership	Representatives manage communication, escalation, approvals, and relationships
Analysis	Cross-functional teams investigate the root cause
Resolution	Corrective and preventive actions implemented for timely closure
Monitoring	Customer feedback collected monthly
Escalation	Lower ratings discussed in Management Representative Meetings (MRM)
Outcome	Targeted actions to strengthen relationships and improve satisfaction

KEY HIGHLIGHTS

4,29,705 GJ

Total Energy Consumption

Our Environment and Climate Action

“Powering Performance, Preserving Planet”

UNSDGs aligned

Protecting the environment is fundamental to HRPTL's vision of responsible and sustainable manufacturing. Guided by its commitment to environmental stewardship, the Company continuously works to reduce its ecological footprint through efficient resource utilization, climate action, pollution prevention, and responsible waste management. By integrating sustainability into its operations, HRPTL aims to create long-term value for its stakeholders while supporting a more resilient and sustainable future.

Waste Management

Environmental Governance & Management Approach

At HRPTL, environmental stewardship is a core operating discipline, not an afterthought. This approach is anchored in a rigorous governance framework, supported by ISO 14001:2015 (EMS) certifications across our manufacturing facilities, along with ISO 50001:2018 Energy Management System certifications at select locations, and reinforced through our Environment Policy and Sustainability Policy. Environmental and energy performance data are integrated into business planning, operational execution, and performance reviews. To ensure systematic compliance and sustainable value creation, we follow a continuous four-step lifecycle across our facilities to identify, assess, mitigate, and continuously improve our environmental footprint.

HRPTL is committed to integrating environmentally responsible practices across its operations, guided by both its Sustainability Policy and Environment Policy. The Company focuses on preventing pollution, managing wastewater and industrial effluents, controlling air, water, noise and land pollution, and complying with applicable environmental requirements. It promotes efficient use of natural resources, reduction in non-renewable resource consumption, increased adoption of renewable and alternative energy, responsible waste management, and continual improvement in environmental performance.

HRPTL also aims to strengthen its environmental performance through EMS, decarbonisation initiatives, resource efficiency, waste reduction and circularity, water conservation and reuse, and protection of natural capital and biodiversity. The Company seeks to optimise manufacturing processes, transition towards low-carbon and renewable energy sources, and reduce environmental impacts across its operations and value chain.

Environmental responsibility is further supported through awareness and engagement of employees and relevant external stakeholders. The Company communicates its environmental expectations internally through these policies and shares them with relevant business partners as well, reinforcing accountability and encouraging responsible environmental practices across its value chain.

Building Sustainability into Every Decision We Make

A message from our General Manager – Sustainability

“Embedding Sustainability in Every Decision We Make”

I am pleased to present HRPTL's first Sustainability Report, reflecting the structured effort we've undertaken to embed ESG principles across our operations during this landmark year of integration.

Bringing together Highway Industries Limited and Roop Automotives Limited gave us a unique opportunity to build our ESG foundation right from day one through a clear governance framework, a dedicated ESG Committee, and ESG Leads at every plant.

We conducted our first materiality assessment, began GHG accounting across Scope 1, 2, and key Scope 3 emissions, and conducted Life Cycle Assessment of a flagship product.

On the ground, this meant strengthening energy efficiency and renewable adoption, tightening water and wastewater management, and reinforcing health and safety practices all anchored by CXO-level oversight that keeps ESG integral to how we make decisions.

Aligned with standards, this report marks the start of a journey we intend to pursue with the same precision we bring to our engineering. My thanks to our employees, plant teams, and leadership for getting us here. I look forward to building a more transparent, resilient HRPTL together.

Mr. Naveen Kumar
General Manager - Sustainability

Climate change, Energy and Emissions Management

Energy Management

Energy efficiency remains a key pillar of HRPTL's sustainability journey. The Company is committed to improving the energy performance of its manufacturing operations by optimising processes, upgrading equipment where feasible, and encouraging responsible energy use across its facilities. By integrating energy management into our day-to-day operations, HRPTL enhances operational efficiency while minimising the environmental impact of its business activities.

Our approach is guided by a culture of continuous improvement, with regular monitoring of energy performance and identification of opportunities to optimise energy resource consumption. Through sustained focus on energy conservation, cross-functional collaboration, and responsible operational practices, we create long-term value for our stakeholders while contributing to a more sustainable manufacturing ecosystem.

Performance Highlights & Key Energy Metrics

PERFORMANCE HIGHLIGHTS

- Our Chennai Plant operates on 82% renewable electricity
- Solar energy used in 5 out of 11 locations
- Renewable energy through PPAs (wind and solar) at Chennai Plant

KEY ENERGY METRICS

- Total Energy Consumption – 4,29,705 GJ
- Contribution of Renewable Energy to total energy – 3.85%
- Energy Intensity –

Energy is a critical input across HRPTL's manufacturing operations, powering production equipment, machining processes, heat treatment, compressed air systems, utilities, material handling, lighting, and facility infrastructure. As a significant contributor to the Company's operational footprint, energy consumption is optimised through efficient technologies, process improvements, and responsible energy management practices enhancing operational efficiency, reducing GHG emissions, and support HRPTL's long-term sustainability and decarbonisation objectives.

Energy Consumption (GJ)

■ FY 2025-26 ■ FY 2024-25

Total energy consumption increased by 5.83%, from 4,06,026 GJ in FY 2024-25 to 4,29,705 GJ in FY 2025-26. This increase was accompanied by a significant 111.29% rise in renewable electricity consumption, from 7,823 GJ to 16,528 GJ, increasing its contribution to the overall energy mix from approximately 1.93% to 3.85%. Non-renewable grid electricity remained largely stable, declining marginally by 0.30%, from 3,52,053 GJ to 3,50,994 GJ, while non-renewable fuel consumption increased by 34.74%, from 46,150 GJ to 62,182 GJ. Overall, the increase in renewable energy adoption reflects continued progress towards diversifying the energy mix, while the rise in non-renewable fuel consumption highlights an opportunity to further strengthen energy-efficiency measures and accelerate the transition towards lower-carbon energy sources.

HRPTL has identified three key pillars for the effective management of energy across its operations: Energy Efficiency, Renewable Energy, and Energy Management. These pillars focus on optimizing energy consumption through efficiency initiatives, increasing the adoption of renewable energy sources such as solar and wind, and strengthening energy governance through Energy Management System (EMS) across its plants.

To advance these priorities, HRPTL has undertaken several initiatives across its manufacturing facilities. These include the adoption of energy-efficient induction motors, VFD-based air compressors, compressed air management, and process optimisation to reduce energy consumption and improve operational efficiency. HRPTL has also accelerated its renewable energy transition through wind power procurement and rooftop solar installations across facilities, including Chennai, Manesar, Sohna and other Company's locations. In parallel, the Company has strengthened energy governance through the deployment of a digital EMS across 200+ machines at its Chennai and Manesar - Unit II facilities, enabling real-time monitoring, automated reporting, performance tracking and alerts. Together, these initiatives support HRPTL's efforts to improve energy performance, reduce GHG and accelerate its decarbonisation journey.

Emissions Management

Climate change remains one of the most significant global challenges, with increasing risks arising from extreme weather events, resource scarcity, and the transition to a low-carbon economy. As a manufacturer of precision-forged automotive components, we recognise our responsibility to minimise the environmental impact of our operations while supporting the transition towards a more sustainable automotive value chain. Our climate strategy is centred on improving energy efficiency, increasing the use of renewable energy, and reducing GHG emissions through operational excellence and continuous innovation.

A key focus of our environmental management approach is the measurement and management of our GHG emissions. We continuously monitor our Scope 1 emissions arising from fuels consumed in manufacturing processes, company-owned vehicles, Scope 2 emissions associated with purchased electricity consumed across our manufacturing facilities, and Scope 3 emissions from key applicable categories within our value chain. This comprehensive assessment enables us to identify emission hotspots, establish performance baselines, and implement targeted initiatives to improve energy performance, engage with value chain partners, and reduce our overall carbon footprint.

Performance Highlights

- GHG Emission Intensity (tCO₂e/INR million) -
- **GHG emission reduced through renewable energy incorporation – 3,260 tCO₂e**

Key GHG Emission Metrics

- Scope 1 emission - **4,832 tCO₂e**
- Scope 2 emission – **69,224 tCO₂e**
- Scope 3 - **85,398 tCO₂e**
- Total GHG emission - **1,59,454 tCO₂e**

GHG Emission profile

Scope 1 emissions of 4,832 tCO₂e represent direct emissions from sources owned or controlled by the Company.

Scope 2 emissions of 69,224 tCO₂e arise primarily from purchased electricity.

Scope 3 emissions of 85,398 tCO₂e represent indirect emissions across the value chain. Overall, **HRPTL** reported 1,59,454 tCO₂e of total GHG emissions, with Scope 3 being the largest contributor. Renewable energy accounted for 3.85% of total energy consumption and helped avoid an estimated 3,260 tCO₂e of emissions, demonstrating the Company's ongoing efforts to reduce its dependence on conventional energy and advance its decarbonisation journey.

Scope 3 Emissions

The Scope 3 emissions profile is primarily driven by upstream activities associated with manufacturing and energy consumption. Category 1 – Purchased Goods and Services represent the largest contributor, reflecting emissions associated with materials, components and other production inputs. This is followed by Category 3 – Fuel and Energy Related Activities, associated with upstream emissions from fuels and purchased electricity. Other relevant sources include Category 2 – Capital Goods, Category 7 – Employee Commuting, Category 5 – Waste Generated in Operations, and Category 6 – Business Travel. This profile reflects the nature of the automotive manufacturing value chain and highlights supplier engagement, low-carbon materials, material efficiency, renewable energy adoption and operational efficiency as key opportunities for reducing HRPTL's Scope 3 emissions.

Scope 3 Emissions Estimation Methodology

Scope 3 emissions were quantified using established GHG Protocol methodologies. A spend-based approach using Environmentally Extended Input-Output (EEIO) emission factors was applied for Category 1: Purchased Goods & Services and Category 2: Capital Goods. An average-data method was used for Category 3: Fuel- and Energy-Related Activities and Category 5: Waste Generated in Operations. A distance-based approach using DEFRA emission factors was applied for Category 6: Business Travel and Category 7: Employee Commuting.

This distribution highlights the significance of upstream supply chain emissions, reinforcing the importance of responsible sourcing, supplier engagement, and energy efficiency in addressing our full carbon footprint. As our Scope 3 measurement capabilities mature, we will progressively expand our value chain emissions assessment to other applicable categories.

By increasing the share of renewable energy through wind and rooftop solar installations, we aim to reduce our dependence on conventional energy sources and lower our carbon footprint. We are also strengthening value chain sustainability by monitoring key Scope 3 emissions, integrating life cycle assessment into product development, and engaging with suppliers to drive environmental improvements.

Life Cycle Assessment – Forged Yoke

As part of our commitment to sustainable product development, we undertook a Life Cycle Assessment (LCA) of one of our major product groups, Forged Yoke, to evaluate its environmental impacts across key stages of the product life cycle. Using a cradle-to-gate approach, the assessment covered raw material extraction, upstream transportation, manufacturing, energy and resource consumption, and product packaging, while excluding the use and end-of-life phases. The study provided valuable insights into resource consumption, GHG emissions, land use, water consumption, and other environmental impact categories, enabling us to identify environmental hotspots and opportunities for improvement.

The findings will support informed decision-making in product design, material selection, and manufacturing processes, while strengthening our ability to meet evolving customer expectations. Going forward, we aim to integrate life cycle thinking into our product development and decarbonisation strategy, collaborate with key suppliers to improve upstream environmental performance, and drive continuous improvements across the value chain.

Key Initiatives

Case studies in climate, energy and emission management

Case Study I: Accelerating the Renewable Energy Transition

We have progressively increased the adoption of renewable energy across our operations, particularly at the Chennai Plant. Through a combination of wind power procurement and on-site solar installations, we continue to reduce our dependence on conventional electricity while lowering our Scope 2 GHG emissions.

The Company has progressively strengthened its renewable energy integration journey, moving from initial rooftop solar installations towards a more diversified and scalable renewable energy portfolio. Starting with an 87 kWp rooftop solar installation at Sohna in FY 2016 - 17, the Company has expanded its rooftop solar capacity to 2,503 kWp by FY 2025–26, covering key locations including Chennai, IMT-1 Manesar, Pune, Sohna and RAFPL. This growth has been complemented by renewable energy procurement through solar and wind power, enabling the Company to increase the share of renewable energy in its operations while reducing associated greenhouse gas emissions.

During FY 2025–26, renewable energy initiatives resulted in approximately 3,260 tCO₂e of avoided emissions. Going forward, the Company aims to further integrate renewable energy through power purchase agreements (PPAs), renewable open access and additional rooftop solar installations, supporting its transition towards a lower-carbon and more energy-resilient business.

Looking ahead, the Company aims to accelerate renewable energy integration through renewable open-access power and solar power purchase agreements (PPAs). These initiatives are expected to increase the share of renewable electricity across operations, reduce dependence on conventional grid power and enhance the resilience of the Company's energy portfolio. The Company will continue to evaluate opportunities for scaling renewable energy procurement in line with its decarbonization ambitions and long-term transition towards a lower-carbon energy mix.

Solar installation at RAFPL (Dharuhera) Plant

Solar installation at Sohna Plant

Case Study II: Enhancing Energy Efficiency Through Operational Excellence

Improving energy efficiency remains a key pillar of HRPTL's operational excellence and sustainability journey. Across our manufacturing plants and office locations, opportunities to optimise energy consumption, improve equipment performance, and enhance operational efficiency are continuously identified and implemented through engineering improvements, process optimisation, preventive maintenance, and the adoption of energy-efficient technologies. The initiatives highlighted below represent some of the key interventions undertaken during the year as part of our broader commitment to responsible energy management and continuous improvement.

Energy-efficient induction motors

A significant initiative involved the deployment of energy-efficient induction motors, replacing conventional motors with high-efficiency alternatives. This upgrade has reduced energy consumption, extended equipment life, improved operational reliability, and minimised maintenance downtime, contributing to both operational and environmental performance.

VFD-based air compressors

To further optimise energy use, we installed Variable Frequency Drive (VFD)-based air compressors that automatically regulate motor speed in response to compressed air demand. This intelligent control system has reduced power consumption, improved energy efficiency, maintained stable air pressure, lowered maintenance costs, and enhanced the overall sustainability of our manufacturing operations.

Compressed air management

In parallel, we strengthened our compressed air management practices through regular inspection and maintenance of pneumatic valves to prevent air leakages and optimise system pressure. Timely maintenance and replacement of components have improved air utilisation, enhanced automation reliability, and reduced avoidable energy losses.

Motion Sensors for Office Lighting

Motion sensors are being installed in office areas to automatically switch off lights after one minute of inactivity, minimizing unnecessary electricity consumption.

Idle Timer – Automatic Equipment Cut-off

Idle timers are being installed on Special Purpose Machines (SPMs) in the connecting rod and crankshaft divisions to automatically cut off equipment after 3 - 4 minutes of inactivity. Currently implemented on most of the machines, with plans for further expansion.

Replacement of High-Power Motors with Energy-Efficient Alternatives

High-power motors at the forge shop are being replaced with lower-capacity motors to optimize electricity consumption. Four 5 HP motors have been replaced with 2 HP motors, and one 10 HP motor has been replaced with a 5 HP motor.

Optimised effluent treatment at Manesar

Previously, the effluent generated from our manufacturing operations at the Manesar Plant required heating to facilitate the treatment process, resulting in significant electricity consumption. By adopting an optimised chemical treatment process, the need for heating was eliminated while maintaining the required treatment efficiency. This transition has reduced energy consumption, lowered operating costs, and improved the overall efficiency of our Effluent Treatment Plant, supporting our commitment to sustainable operations

Pedestal Fan Alignment with CNC Machines

Pedestal fans have been aligned with their respective CNC machines so that the fans are switched off when the associated machine is switched off, helping avoid unnecessary power consumption.

Digitalising Energy Management with EMS

At HRPTL, we have strengthened our energy management capabilities through the implementation of a digital EMS. The system has been deployed across more than 200 machines at our Chennai and Manesar (Unit II) manufacturing facilities, enabling real-time monitoring and centralised recording of machine-level energy consumption.

At HRPTL, we have strengthened our energy management capabilities through the implementation of a digital EMS. The system has been deployed across more than 200 machines at our Chennai and Manesar (Unit II) manufacturing facilities, enabling real-time monitoring and centralised recording of machine-level energy consumption.

The EMS provides comprehensive visibility into energy performance through real-time and historical dashboards, target-based monitoring, automated reporting, and instant alerts for energy deviations. By replacing manual data collection with a digital platform, the system has enhanced the accuracy of energy data, improved operational control, and enabled timely identification of energy-saving opportunities across critical manufacturing processes.

The implementation of the EMS marks an important step in our digital transformation journey, supporting data-driven decision-making and continuous improvement in energy performance. Going forward, we aim to further leverage digital energy management to optimise resource efficiency, reduce greenhouse gas emissions, and strengthen our decarbonization efforts while enhancing the overall sustainability of our manufacturing operations.

HRPTL is leveraging digital energy management to improve operational efficiency, optimise energy performance, and accelerate its decarbonisation journey.

- More than 2 lakh units saved
- More than 150 tCO₂e of GHG emission reduced
- EMS deployed across 200+ machines
- Real-time energy monitoring and dashboards
- Automated reporting and instant alerts

Air Emissions

We are committed to minimising air emissions by improving the environmental performance of our manufacturing operations. Through the adoption of cleaner fuels, energy-efficient technologies, process optimisation, and enhanced emission control measures, we strive to reduce emissions associated with our operations, including particulate matter (PM), sulphur oxides (SO_x) and nitrogen oxides (NO_x).

Air Emission*	Unit of Measurement	FY 2025-26	FY 2024-25
NO _x	MT	1.16	0.78
SO _x	MT	0.27	0.06
Particulate matter (PM)	MT	1.84	0.89

*The emissions mentioned above excludes plants of HRIL.

We continuously monitor our emissions and ensure compliance with applicable environmental regulations and statutory requirements across our manufacturing facilities. By integrating environmental considerations into our operational practices and investing in cleaner technologies, we remain focused on reducing our environmental footprint and supporting sustainable manufacturing.

Key Air Initiatives

During FY 2025–26, HRPTL strengthened its air emission management by implementing initiatives to reduce emissions from backup power generation and improve environmental performance across its manufacturing operations. The Company continues to adopt cleaner technologies and emission control measures to minimize the impact of air pollutants while ensuring compliance with applicable environmental regulations.

Installation of Retrofit Emission Control Device (RECD) on DG Sets

At our Sohna, to reduce emissions from diesel generator (DG) sets used during power interruptions, HRPTL installed **Retrofit Emission Control Devices (RECDs)** along with **Diesel Exhaust Fluid (DEF) systems** at its facilities. While the RECD technology effectively captures and reduces particulate matter (PM) emissions from diesel exhaust, the DEF system significantly lowers nitrogen oxide (NOx) emissions by converting them into harmless nitrogen and water vapour. Together, these technologies improve local air quality and enhance the environmental performance of standby power operations.

KEY OUTCOMES

- Reduced particulate matter (PM) emissions through RECD technology.
- Lowered nitrogen oxide (NOx) emissions using DEF-based SCR systems.
- Improved ambient air quality around manufacturing facilities during DG operations.
- Strengthened compliance with applicable air emission regulations and environmental standards.

IMPACT

The deployment of RECD and DEF systems has significantly strengthened HRPTL's air emission management by reducing particulate matter and nitrogen oxide emissions from standby power generation. These initiatives demonstrate the Company's commitment to adopting cleaner technologies, improving environmental performance, and supporting sustainable manufacturing through continuous reduction of operational air emissions.

Retrofit Emissions Control Device (RECD)

Diesel Exhaust Fluid (DEF)

Journey so far

Laying the Groundwork for Energy and Climate Excellence

Several decarbonization measures undertaken across Plants for reducing optimizing energy consumption and reduce GHG emissions.

Integrated renewable energy at 5 of 11 manufacturing plants through rooftop solar installations and PPAs.

Established a comprehensive GHG inventory covering Scope 1, Scope 2, and key Scope 3. emissions.

Conducted LCA of the Forged Yoke

Achieved ISO 14001 and ISO 50001 certification across various manufacturing plants.

Way Forward

Transitioning from Standardized Baselines to High-Impact Decarbonization

Implement a comprehensive decarbonization roadmap to take planned and targeted initiatives across all locations to manage energy and emissions.

Further expand renewable energy procurement through PPAs and through rooftop solar at other locations.

Broaden Scope 3 emissions coverage across the value chain to all applicable categories.

Conduct LCA for additional product groups to identify impacts and decarbonization opportunities.

Further extend these certifications to all locations.

Water Management

Water is an essential resource in our manufacturing operations, supporting forging, machining, heat treatment, cooling systems, and other utility processes, while also meeting domestic requirements across our facilities. We are committed to the responsible management of water resources through process optimisation, efficient water use, wastewater treatment, and recycling initiatives. By continuously monitoring water consumption and implementing conservation measures, we strive to improve water efficiency and minimise our environmental impact.

Four Core Principles of Water Stewardship

1

Responsible Procurement

from authorized supply networks

2

Telemetry & Monitoring

of facility-level withdrawal and consumption

3

Maximised Circularity

via treated wastewater reuse

4

Reduced Freshwater Dependence

systematic reduction of absolute demand

Our water stewardship strategy is governed by four core principles: responsible procurement from authorised supply networks, rigorous telemetry and monitoring of facility-level withdrawal and consumption, maximised circularity via treated wastewater reuse, and the systematic reduction of absolute freshwater dependence.

HRPTL sources water from groundwater and municipal water supplies, ensuring compliance with all applicable regulatory requirements across its manufacturing facilities. During FY 2025-26, the Company withdrew 1,34,517 kL of water from these sources, while total water consumption during the reporting period was 1,05,474 kL, reflecting water utilised in manufacturing processes, utilities, and domestic operations.

Water consumption increased from 1,01,107 kL in FY 2024-25 to 1,05,474 kL in FY 2025-26, broadly in line with the scale-up of production activities and consequently water discharge increased to 29,043 kL, marginally higher than 28,924 kL in the previous year.

Key water metrics trend analysis

Key Water Metrics	Unit Of Measurement	FY 2025-26	FY 2024-25
Total Water Withdrawal	KL	1,34,517	1,30,031
Groundwater (Borewells)	KL	91,828	92,336
Third-Party (Municipal)	KL	42,689	37,695
Water Consumption	KL	1,05,474	1,01,107
Water Discharge	KL	29,043	28,925
Water Intensity (INR/ mn turnover)	KL/₹ million	-	-

 Water Withdrawal from water-stressed areas

Most of HRPTL's facilities operate in regions identified as water-stressed, making targeted monitoring of water usage in these locations a key priority. The table below presents water withdrawal from water-stressed geographies across our three operating entities:

Entity	Unit	FY 2025-26	FY 2024-25
HRPTL	KL	49,671	40,590
RAFPL	KL	10,071	13,455
HRIL	KL	62,461	66,687
Total water withdrawal from water-stressed regions	KL	1,22,202	1,20,732

Wastewater Management and Water Conservation Initiatives

Wastewater generated from our manufacturing operations is treated through Effluent Treatment Plants (ETPs) and Sewage Treatment Plants (STPs) installed in most of our facilities, ensuring that treated effluent meets applicable discharge standards before being channelled for reuse or discharge. Treated water is reused for gardening, domestic facility applications, and other operational needs, reducing our dependence on freshwater sources and minimising water discharge into the environment.

Going forward, HRPTL aims to progressively enhance water circularity across its operations by evaluating the implementation of Zero Liquid Discharge (ZLD) systems at suitable facilities, in line with our long-term sustainability commitments.

Key Water Initiatives

During FY 2025–26, HRPTL implemented several initiatives to improve water conservation and water management, reinforcing its commitment to the responsible use of water resources. The Company continues to enhance water efficiency across its facilities through process improvements, water reuse, and sustainable water management practices.

Enabling Water Reuse Through UF-RO

UFRO System at Sohna Plant

At our Sohna, Manesar (Unit I), Manesar (Unit II), and Chennai facilities, we installed Ultrafiltration-Reverse Osmosis (UF-RO) systems to treat and reuse process water. Instead of being discharged after a single use, treated water is reused in manufacturing operations, flushing, and gardening, helping reduce freshwater consumption and improve water efficiency.

KEY OUTCOMES

- Reduced freshwater withdrawal through reuse of treated process water
- Reused treated water for operations, flushing, and gardening
- Increased the share of recycled water across facility operations

IMPACT

This initiative has strengthened water reuse practices across our facilities, reduced dependence on freshwater sources, and supported the Company's commitment to responsible water management.

Waste Management

As a precision automotive components manufacturer, our operations generate both hazardous and non-hazardous waste. We manage waste responsibly, grounded in the principles of Reduce, Reuse, and Recycle (3R), and in full compliance with applicable environmental regulations and Pollution Control Board's (PCB) guidelines.

Our waste management approach begins at the source, with waste segregated at point of generation into hazardous and non-hazardous categories. Designated waste management areas with defined handling and storage protocols, employee awareness programmes, and authorised third-party recyclers and disposal agencies together form the backbone of our waste governance framework.

Waste Generation

HRPTL follows a systematic approach to waste management, focused on waste minimisation, resource recovery, regulatory compliance, and responsible disposal. Waste generated across operations is segregated into hazardous and non-hazardous streams at the source and managed through established procedures to ensure safe handling, storage, transportation, and disposal. The table below presents total waste generated from our operations during FY 2025-26 compared to the previous year:

Waste Category	Unit	FY 2025-26	FY 2024-25
Plastic Waste	MT	32.20	20.23
E-Waste	MT	9.30	3.88
Biomedical Waste	MT	0.0137	0.0114
Battery Waste	MT	1.76	1.75
Other Hazardous Waste	MT	514.64	453.75
Non-Hazardous Waste (including MS scrap)	MT	19,040.73	19,810.44
Total Waste Generated	MT	19,598.64	20,290.06
Waste Intensity	MT/₹ million	-	-

The total waste generated decreased from 20,290.06 MT in FY 2024–25 to 19,598.64 MT in FY 2025–26, indicating an overall reduction of approximately 3.4%. Non-hazardous waste, including MS scrap, remained the largest waste category, accounting for most of the total waste generation, while hazardous waste increased from 453.75 MT to 514.64 MT. Plastic waste and e-waste also increased, whereas battery waste remained broadly stable. Biomedical waste remained negligible. Overall, the reduction in total waste generation reflects progress in waste management, although opportunities remain to further reduce hazardous and recyclable waste streams.

Hazardous waste is managed in accordance with applicable statutory requirements and maintained in a comprehensive waste registry to ensure traceability. The Company engages only authorized agencies for the collection, transportation, recycling, treatment, and disposal of hazardous waste, adhering to the guidelines prescribed by the State Pollution Control Board (SPCB) and Central Pollution Control Board (CPCB).

Non-hazardous waste is systematically segregated and channelled towards recycling, or other appropriate recovery processes through authorised recyclers, wherever feasible. Through efficient material utilisation, waste segregation, and circular economy practices, HRPTL continues to reduce waste generation at source and improve resource efficiency across its operations.

Bio-medical waste segregation bins

Waste Directed to/Diverted from Disposal

HRPTL maps all facilities for waste generation sources and disposal pathways. We have strengthened data collection systems and integrated waste volumes into periodic environmental monitoring processes, enabling us to identify landfill diversion barriers and implement targeted corrective measures.

	FY 2025-26 (MT)	FY 2024-25 (MT)
Diverted from disposal		
Total waste diverted from disposal (Recycle/Reuse)	19,598.62	20,290.05
Directed to disposal		
Total waste directed to disposal (Incineration)	0.014	0.011

Resource Efficiency & Circular Economy

Responsible resource management is a core dimension of HRPTL's operational philosophy. How the Company sources, uses, and manages materials is as important as the quality of the components it produces. This approach is guided by the principle of maximising value from every unit of material while progressively reducing waste generation, dependence on virgin resources, and the environmental footprint of the supply chain.

Steel is the primary raw material used in our manufacturing operations. In FY 2025-26, recycled and reused steel accounted for almost **80% of total steel consumed by weight**, reflecting our ongoing commitment to circular material flows and reduced virgin resource consumption. We continuously seek opportunities to optimize material yield, reduce process scrap, and enhance lean manufacturing practices across our operations.

As a Tier 1/Tier 2 supplier to OEM partner, the integration of our products into our customers' end products limits our direct scope for end-of-life product recovery. However, within our operational boundaries, we are committed to maximising material efficiency through systematic scrap recovery, treated process output reuse, and responsible recycling partnerships with authorised agencies.

Key Waste Reduction Initiatives

HRPTL's waste management approach focuses on hazardous waste minimisation, process discipline, and proactive maintenance reducing waste at source before it is generated.

Hydraulic Power Pack Improvement Programme

Reducing Hazardous Waste at Source

PROGRAMME

Hydraulic systems in precision manufacturing are critical to process performance, but inadequate maintenance can result in oil leakages, fluid contamination, and increased hazardous waste generation. HRPTL implemented a structured Hydraulic Power Pack Improvement Programme focused on preventive maintenance, routine inspections, and continuous system monitoring. The programme included regular monitoring of hydraulic oil quality and levels, rigorous seal and fitting inspections, standardised filter replacement schedules, and continuous temperature and pressure monitoring. These measures reduced oil losses, improved equipment reliability, minimised maintenance disruptions, and lowered hazardous waste generation, while enhancing shopfloor safety by reducing spill-related risks.

 RESULT	• Oil losses reduced through proactive seal, fitting, and filter management • Hazardous waste generation lowered by minimising hydraulic fluid contamination • Improved equipment reliability and reduced unplanned maintenance downtime • Shopfloor safety enhanced through reduction in hydraulic spill-related risks
 IMPACT	Demonstrated how disciplined preventive maintenance can reduce hazardous waste generation at source, improving both environmental outcomes and operational performance.

At HRPTL, environmental stewardship is not a destination; it is an ongoing commitment embedded in every decision we make, every process we run, and every component we manufacture. We remain dedicated to progressing our environmental performance in a transparent, measurable, and accountable manner, for the long-term benefit of our business, our stakeholders, and the planet.

KEY HIGHLIGHTS

Our Employees, Community and Stakeholders

“Investing in People, Strengthening Communities”

UNSDGs aligned.

Long-term business success is built on creating value for all stakeholders, including employees, customers, suppliers and value chain partners, investors, local communities, and regulators. As a leading automotive component manufacturer, HRPTL is committed to building a safe, inclusive, and engaging workplace, upholding fair labour practices, strengthening employee capabilities, delivering high-quality and reliable products, maintaining ethical and transparent business relationships, and driving responsible operations across its value chain. Through proactive stakeholder engagement, strong governance, and meaningful community initiatives, we strive to build trust, enhance resilience, and create sustainable value while contributing to inclusive economic and social development.

Management Approach

Our approach to social sustainability is integrated into our overall business strategy and operational management, ensuring social considerations are embedded across our decision-making processes and day-to-day operations. It is anchored in a robust policy framework that translates our commitment to maintaining a safe, inclusive, and equitable workplace into practice. Governance of social matters is shared across dedicated Human Resources and functional teams at our facilities, with the senior management responsible for overseeing and implementing key policies, including the Human Rights Policy, Diversity, Equity, Inclusion and Belongingness (DEI) Policy, Women Rights Policy and Grievance Redressal Policy. The Board provides oversight of statutory policies, including the Code of Conduct, POSH Policy, and Whistleblower Policy, ensuring compliance with applicable legal and regulatory requirements while promoting high standards of ethics, integrity, and accountability across the organisation.

Key social aspects are identified through regular stakeholder engagement, with associated risks and opportunities evaluated to strengthen our management practices and enhance organisational resilience. This continual improvement approach enables us to advance our social performance, maintain a positive workplace culture, and build long-term, sustainable relationships with our employees and other stakeholders.

Human Capital Management

At HRPTL, our people are the foundation of our long-term success. We are committed to maintaining an inclusive, high-performing workplace where every employee is empowered to grow, innovate, and contribute to shared business objectives. Our approach to human capital management rests on two pillars:

Diversity & Equal Opportunity

We are committed to an inclusive workplace that gives every employee equal opportunity, draws on diverse talent, and holds together a unified organisational culture grounded in fairness and merit. This extends across recruitment, development, recognition, and career advancement, with a focus on attracting diverse talent and enabling new hires to integrate seamlessly into our culture and contribute from the outset. Through robust human resource policies, employee engagement initiatives, and welfare programmes, we promote diversity, inclusion, and well-being enabling our workforce to thrive while strengthening organisational resilience.

Learning & Skill Development

We invest in continuous learning and capability-building to develop a skilled, adaptable and future-ready workforce equipped to meet evolving business needs. Continuous learning is integral to operational excellence, product quality, workplace safety, and sustainable growth. Through structured technical, functional, leadership, and compliance training programmes, we enhance employee capabilities, encourage innovation and accountability, and cultivate a culture of continuous improvement that supports both individual growth and the Company's long-term performance.

Highlights

Our Workforce

Our workforce comprises 8,586 employees and workers, reflecting the scale and diversity of our operations. We continue to strengthen our talent base by maintaining a balanced workforce across different age groups, with a significant proportion of employees and workers in the 30 - 50 years age bracket, bringing valuable experience and technical expertise to our operations. At the same time, the presence of a younger workforce supports innovation, adaptability, and the development of future talent. We are also committed to cultivating a more inclusive workplace by promoting gender diversity across our workforce and creating equal opportunities for career growth and development.

CATEGORY	TOTAL	GENDER		AGE GROUP		
		Male	Female	<30	30-50	>50
Permanent Employees	1,197	1,126	71	380	709	108
Permanent Workers	1096	1,080	16	328	599	169

Talent Attraction & Retention

Attracting, developing, and retaining skilled talent is critical to sustaining operational excellence and long-term business growth. We strive to provide a workplace that offers meaningful career opportunities, continuous learning, competitive rewards, and an inclusive work environment where employees can thrive. Through merit-based recruitment, structured career development, performance-driven recognition, and employee engagement initiatives, we aim to build a motivated, future-ready workforce while cultivating long-term employee commitment and reducing attrition.

MERIT-DRIVEN TALENT MANAGEMENT

HRPTL continued to strengthen its workforce through targeted recruitment to support expanding manufacturing operations. We continued to recruit employees across functions to meet organisational requirements. The distribution of new employee hires across gender and age-group during the reporting period is presented below. To increase female workforce participation, we encourage our employees to refer female candidates through Employee Referral Programme, under which employee receive an additional referral incentive for successfully referring a hired woman candidate.

New Employee Hires

The Company manages attrition through a comprehensive people strategy focused on talent attraction, structured onboarding, continuous learning, career development, employee engagement, and employee well-being. By cultivating an inclusive work environment with meaningful growth opportunities and regular performance feedback, HRPTL aims to enhance employee satisfaction, strengthen retention, and build a resilient workforce.

Attrition rate for the permanent workforce

CATEGORY	FY 2025-26			FY 2024-25			FY 2023-24		
	Male	Female	Total	Male	Female	Total	Male	Female	Total
Permanent Employees	25%	36%	25%	23%	23%	23%	23%	40%	24%
Permanent Workers	27%	75%	27%	18%	30%	18%	13%	20%	13%

Career development & Progression

At HRPTL, career development is structured around defined grade levels, roles and competency expectations across functions, enabling our workforce to understand the skills, experience, and performance standards required for future growth.

Annual performance and career development reviews are an integral part of our talent management. These reviews provide a structured mechanism for assessing individual performance, recognising contributions, identifying development needs, and facilitating ongoing dialogue between employees and management on career growth and capability enhancement. Employees and workers demonstrating plausible performance during the review process are recognised through performance-linked monetary rewards, reinforcing a culture of merit, accountability, and excellence.

HRPTL conducted career development and performance reviews for 100% of its employees and workers, ensuring equitable opportunities for growth, skill enhancement, and career progression.

Learning & Skill Development

Our learning and development framework is designed to address the diverse training needs of employees and workers across all levels of the organisation. Training programmes are structured around role-specific requirements, skill enhancement, leadership development, quality management, safety, compliance, and operational excellence. Training needs are identified through performance reviews, business requirements, competency assessments, and evolving industry expectations.

KEY HIGHLIGHTS

At HRPTL, continuous learning is integral to building a skilled, safety-conscious, and future-ready workforce. During the reporting period, the majority of our permanent employees and workers participated in health and safety training, reinforcing our commitment to maintaining a safe and healthy workplace. We also continued to invest in technical and skill development programmes aimed at enhancing employee capabilities, improving operational excellence, and supporting long-term career growth.

Training programmes were structured during the year around four key pillars: building technical expertise, strengthening leadership, promoting workplace safety, and reinforcing governance and compliance across the organisation. The major pillars in which trainings were imparted have been depicted below:

FOUR PILLARS OF TRAINING

During the reporting period, the Company conducted structured training programmes tailored to the roles and responsibilities of different stakeholder groups as detailed below:

 Board of Directors and KMP Members of the Board of Directors and Key Managerial Personnel received training on leadership, corporate governance, conflict of interest, regulatory compliance, ethical business practices, and ESG-related responsibilities.	 Employees Employees participated in programmes covering quality management, production and maintenance, occupational health and safety, leadership and behavioural skills, technical and product knowledge, supply chain management, policy awareness, and continuous improvement.
 Workers Workers were trained on machine operations, maintenance, quality control, workplace safety, emergency preparedness, material handling, environmental practices, productivity enhancement, and process excellence, enabling them to perform their roles safely, efficiently, and in line with the Company's operational standards.	 ESG Training ESG training programmes were conducted across all plants to enhance awareness and strengthen sustainability capabilities among key stakeholders. The sessions focused on ESG disclosures and reporting requirements, GHG inventory and accounting, Carbon Border Adjustment Mechanism (CBAM), climate risk management, ESG ratings and assessments, and emerging sustainability regulations, enabling stakeholders to effectively integrate ESG considerations into business processes and decision-making.

DOJO Training: The Company operates DOJO centres to strengthen the skills of operators and ensure they are adequately prepared for their assigned roles. Each operator is required to complete 48 hours of training before deployment, covering nine modules: General DOJO, Safety, Sense, Product, Process, Production, Quality, Maintenance and Evaluation & Certification. The structured programme provides hands-on learning and reinforces safe, quality-focused and efficient operating practices. Operators are also enrolled in periodic skill-upgradation programmes to support continuous learning, enhance technical competencies and build operational capability.

The Company remains committed to developing a future-ready workforce through continuous learning and skill enhancement. By nurturing talent at every level, it reinforces operational excellence and long-term organisational resilience.

Diversity & Equal Opportunity

With employees and workers engaged in manufacturing operations, quality assurance, maintenance, and corporate functions across our facilities and offices, we recognise that diversity and inclusion are essential to strengthening collaboration and driving sustainable business growth. Guided by our core values, we strive to build an inclusive culture that promotes a sense of belonging for all employees. This approach extends across the employee lifecycle, from recruitment and development to performance management and career progression, ensuring decisions are based on merit and capability.

HRPTL's commitment to diversity, equity, inclusion, and belonging is reinforced through its policies and practices. The Diversity, Equity, Inclusion and Belongingness (DEIB) Policy provides a framework for promoting equal access to opportunities and

promoting an inclusive work environment, while our Human Rights Policy supports the fair and dignified treatment of all individuals.

Global Diversity & Inclusion Benchmarks (GDIB) Model

We follow the Global Diversity and Inclusion Benchmarks (GDIB) Model to strengthen diversity, equity, inclusion, and belonging (DEIB) across the organisation. The model is built on four interconnected pillars. The Foundation focuses on establishing our DEIB vision, leadership commitment, employee capability development, and governance. Internal Policies, Practices and Processes integrate DEIB into recruitment, career development, workplace behaviour, compensation, employee well-being, and awareness programmes. External Partnerships extend these efforts by engaging with NGOs, communities, government bodies, and other stakeholders. Bridging connects internal initiatives with external impact through awareness, assessments, and continuous improvement. Together, these four pillars help embed diversity and inclusion into our culture, operations, and stakeholder engagement.

To promote workplace inclusion and accessibility, several facilities have been equipped with ramps, accessible washrooms and lifts, while other locations provide ramps and lifts to facilitate the movement of differently abled employees and workers. During FY 2025-26, HRPTL employed 4 differently abled employees and 29 differently abled workers, including 2 female differently abled workers, reflecting our commitment to equal employment opportunities and an inclusive workplace for all.

Women remain under-represented in the manufacturing workforce, and HRPTL is committed to creating an environment where women have equitable opportunities to join, grow, and thrive. Our DEIB framework translates this commitment into action through initiatives designed to enhance female participation, retention, and overall workplace experience.

 Empowering Women at the Workplace

Reflecting the workforce composition typically observed across the manufacturing sector, male employees and workers continue to constitute the majority of HRPTL's workforce. Recognising the importance of a diverse and inclusive workplace, we remain committed to providing equal opportunities in recruitment, career progression, learning and development, and workplace engagement based solely on merit, skills, and capability. We continuously monitor workforce demographics as part of our human capital management strategy to strengthen diversity, promote inclusion, and support long-term workforce sustainability.

Women represented 9.09% of the Board and 11.03% of the overall workforce, reflecting our ongoing commitment to strengthening diversity and inclusive leadership. We believe that a diverse Board enhances decision-making, promotes balanced perspectives, and supports effective corporate governance.

FEMALE REPRESENTATION

At HRPTL, we are committed to maintaining a workplace where women employees are supported, respected, and empowered to thrive. Recognising the diverse needs of our workforce, we have implemented a range of women-centric initiatives that promote health, well-being, work-life balance, and an inclusive work environment. These initiatives include women-centric awareness sessions, menstrual leave and hygiene support, day-care facilities, and dedicated relaxation rooms, reinforcing our commitment to creating a safe, supportive, and equitable workplace for women at every stage of their professional journey.

Women-Centric Awareness Sessions

Regular awareness sessions address women's health, workplace safety, employee rights, well-being and inclusion, helping employees make informed decisions at work and in their personal lives.

Menstrual Leave & Hygiene Support

Dedicated menstrual leave supports women employees and workers with dignity and flexibility. Subsidized sanitary products and vending and disposal machines provide convenient access to essential hygiene resources.

Day-care Facility

A dedicated day-care space with toys and crèche amenities provides working parents, particularly women, with a safe and supportive environment for their children during working hours.

Relaxation Room Facility

Dedicated relaxation and rest room facilities provide women employees with privacy, comfort and convenience during the workday, supporting well-being and a safe, respectful workplace.

Supporting dignity, well-being and an inclusive workplace for women employees and workers.

Women centric awareness session

Day care facility at Sohna Plant

Employees and workers at HRPTL are entitled parental leave. While maternity leaves are granted to all women employees as per statutory requirements, paternity leave is currently available only to permanent employees and workers of the parent Company, HRPTL. The Company aims to extend this benefit to all employees and workers across all locations in the coming years.

Parental leave details for FY 2025-26

Category	Male	Female

Human Rights & Labour Practices

RESPECTING PEOPLE. CREATING A FAIR & SAFE WORKPLACE.

Fairness & Equal
Opportunity

Inclusion & Respect

Safety & Dignity

Trust &
Responsibility

Respect for human rights and fair labour practices is fundamental to HRPTL's values and operations. We recognise that our activities can have significant impacts on employees, workers, contractors, and other stakeholders through employment practices, workplace conditions, and business relationships. By promoting diversity, equal opportunity, freedom of association, and safe working conditions, we support our employee's well-being, engagement, and workforce stability. Our key areas of focus include promoting diversity and inclusion, preventing harassment, supporting employee representation, maintaining effective grievance mechanisms, and ensuring the prohibition of child labour and forced labour across our operations.

The rights for our people and stakeholders are well guarded by our comprehensive HR policy, supported by the DEIB Policy, POSH Policy and the Code of Conduct.

forced labour reported

Our Comprehensive HR Policy

Our Human Rights Policy reflects our commitment to respecting and promoting internationally recognised human rights across our operations and value chain. Guided by the UN Guiding Principles on Business and Human Rights and the ILO's Fundamental Principles and Rights at Work, the policy applies to all employees, workers, directors, suppliers, contractors, business partners, and other stakeholders associated with our business.

The policy establishes governance and oversight mechanisms to ensure effective implementation, monitoring, and continual improvement of human rights practices across our operations and value chain.

Components of Human Rights Policy

Embedding human rights principles begins with addressing the most direct forms of workplace harm, including discrimination and harassment, before strengthening the broader policies, systems, and governance mechanisms that uphold human rights across our operations and value chain.

HRPTL is committed to respecting and protecting human rights and ensuring that all individuals associated with the Company are treated with dignity, respect and fairness. The Human Rights policy promotes a workplace that is free from discrimination and harassment, supports diversity and inclusion, and respects freedom of association and collective bargaining. Employment decisions, including recruitment, development, compensation and promotion, are based on merit, qualifications, skills and performance.

The policy establishes a zero-tolerance approach to forced labour, bonded labour, modern slavery, human trafficking and child labour, while requiring safe working conditions and compliance with applicable health and safety requirements. The Company provides wages and benefits in accordance with applicable laws and industry standards. Employees can report human rights concerns, which are investigated and addressed through appropriate corrective action. The policy is communicated to employees through the intranet and its expectations are also extended to relevant business partners and contractual stakeholders.

Addressing Discrimination & Harassment

At HRPTL, maintaining a safe, respectful, and inclusive workplace where all employees are treated with dignity is a core commitment. We follow a zero-tolerance approach towards sexual harassment, bullying, discrimination, and any form of inappropriate workplace behaviour, addressed through a combination of POSH policy, Non-discrimination & harassment policy, Rights of minorities and indigenous people policy and Grievance redressal mechanism policy.

Our POSH Policy, aligned with the Sexual Harassment of Women at Workplace (Prevention, Prohibition and Redressal) Act, 2013, sets out the framework for preventing, prohibiting, and redressing complaints. An Internal Complaints Committee (ICC), headed by a female Presiding Officer and comprising the required representation of members, receives, investigates, and resolves complaints fairly, confidentially, and within defined timelines, with safeguards in place against retaliation or victimisation. Employees can report concerns through designated reporting channels, and we reinforce this framework through regular POSH awareness and sensitisation programmes covering respectful workplace behaviour, reporting mechanisms, and individual responsibilities.

POSH training and awareness sessions

Suggestion Box for employees and workers

HRPTL is committed to maintaining a safe, inclusive and respectful workplace that is free from discrimination and harassment. The Company provides equal employment opportunities and prohibits discrimination based on protected characteristics, while ensuring that employment decisions are based on merit. The policy also establishes mechanisms for confidential reporting and investigation of concerns, prohibits retaliation against complainants, and provides for appropriate disciplinary action in cases of violations.

Zero

Incidents of sexual harassment reported

100%

Employees trained on POSH

Beyond POSH-specific concerns, employees and workers have access to suggestion (Kaizen) box, HR representatives, and dedicated communication channels to raise general, non-POSH grievances. We also respect employees' rights to freedom of association and collective bargaining in accordance with applicable law. During the reporting period, 0% of employees and workers were represented by a labour union or covered under a collective bargaining agreement.

Employees and Workers Grievance Mechanism

HRPTL recorded zero complaints related to child labour, forced labour, or any form of discrimination at the workplace

While these mechanisms govern how concerns are raised and resolved within our own operations, human rights risks are not confined to direct employment rather they can also exist within the broader supply chain. Managing this risk requires extending the same principles of accountability and due diligence beyond our own workforce to our value chain partners.

As a manufacturing organisation, HRPTL recognises that certain human rights risks, including child labour and forced labour, may exist within the broader supply chain. To mitigate these risks, we communicate our expectations through the Supplier Code of Conduct, which outlines requirements related to ethical business practices, human rights, labour standards and regulatory compliance. The suppliers are required to sign the supplier code of conduct before being onboarded. HRPTL also conducts periodic supplier assessments and evaluations to monitor adherence to these requirements.

Employee Health, Safety & Well-being

Health and safety are integral to HRPTL's commitment to operational excellence and employee well-being. Guided by a robust occupational health and safety management framework aligned with ISO 45001:2018, we focus on proactively identifying, assessing, and mitigating workplace risks. Through structured processes encompassing hazard identification, risk assessments, emergency preparedness, incident investigation, and continuous employee engagement, we strive to provide a safe, healthy, and resilient work environment for our employees, contractors, and visitors across all our operations.

Workplace health and safety, access to healthcare, employee well-being, work-life balance, social security coverage, and support during important life stages are key factors that contribute to a healthy, engaged, and productive workforce. HRPTL addresses these priorities through a comprehensive range of occupational health and safety measures, employee welfare initiatives, and support programmes. By regularly assessing employee needs and evaluating the effectiveness of our initiatives, the Company strive to strengthen workforce well-being, prevent workplace injuries and illnesses, enhance employee satisfaction, and maintain a safe, healthy, and supportive work environment across the organisation.

Ensuring a Safe and Healthy Workplace

WORKER SAFETY PILLARS

Given the nature of manufacturing operations, occupational health plays an important role in safeguarding workforce well-being through preventive healthcare, regular medical surveillance, and timely health interventions.

Our Occupational Health & Safety Management System is designed to identify, assess, and manage workplace health and safety risks. It covers all manufacturing facilities, operational activities, employees, and workers across HRPTL. Dedicated safety officers monitor workplace conditions, ensuring compliance with safety procedures, conducting inspections, implement corrective actions, and promote safe work practices across the organisation. To proactively manage occupational health and safety risks, we conduct regular Hazard Identification and Risk Assessment (HIRA) exercises to identify potential hazards and implement appropriate preventive and mitigation controls. The effectiveness of the system is further supported through safety training, workplace inspections, incident investigations, emergency preparedness measures, and periodic management reviews.

On-site Occupational Health Centres (OHCs), staffed with qualified doctors, trained medical personnel and 24*7 availability of ambulances, complement these preventive measures with dedicated occupational health support.

Occupational-Health Center

OHCs with wheel-chair facility

HRPTL follows a structured approach to ensure workplace accidents and near-miss incidents are identified, investigated, and resolved before they can recur. All incidents and near-miss observations are formally documented through a First Incident Report (FIR), enabling timely identification of workplace risks as they arise.

Upon reporting, a cross-functional investigation team- comprising representatives from safety department, the maintenance team, plant leadership, and the safety officer- is constituted to assess the incident and determine its underlying root causes and contributing factors. Based on these findings, corrective and preventive action plans are developed with clearly defined responsibilities and target completion dates.

First-Aid facilities at all Plants with necessary PPE equipment

The implementation status of these actions is subsequently reviewed by management to ensure timely closure and effectiveness. Employees and workers can also raise safety and improvement concerns through additional channels, including the suggestion box, training sessions, and direct reporting to supervisors. Such concerns are reviewed through Gemba observations and the Safety Committee. Outcomes and lessons learned from both routes are fed back into the system, creating a continuous cycle of improvement in workplace safety.

CONTINUOUS CYCLE OF SAFETY IMPROVEMENT

HIRA FRAMEWORK

Beyond responding to incidents after they occur, HRPTL takes a proactive approach to reducing accidents and injuries at the source. This includes regular safety inspections, safety patrols, safety walks, and HIRA exercises, supported by safety instructions, hazard communication signage, safe operating procedures, and PPE requirements displayed prominently across facilities and workstations. Regular safety training, awareness sessions, and emergency response drills.

Our HIRA framework forms an integral part of the occupational health and safety management system and encompasses both routine operational activities and non-routine, high-risk task through regular training.

At HRPTL, regular health and safety training and awareness sessions are conducted to strengthen employee awareness, preparedness, and response capabilities during workplace emergencies. These programmes reinforce safe work practices, improve risk awareness, and build a proactive safety culture across all facilities.

To ensure readiness for emergency situations, periodic mock drills are conducted covering scenarios such as fire incidents, chemical spills, medical emergencies and snake bite management. These drills help evaluate response effectiveness, familiarise employees with emergency procedures, and identify opportunities for continuous improvement in emergency preparedness.

Clear and visible safety signage is installed throughout our facilities to communicate hazards, emergency routes, safe operating practices, and mandatory safety requirements. These visual controls support employee awareness and help maintain a safe working environment.

Employee Well-being and Engagement Initiatives

Our well-being and engagement initiatives are designed to create a healthy, safe, and motivating workplace where employees feel valued and supported. By promoting physical, mental, financial, and social well-being, the Company fosters a positive work environment that enhances employee satisfaction, engagement, and long-term organizational success.

Environment day celebration at HRPTL

Medical Camp

We organised a comprehensive medical health check as part of our commitment to employee health and well-being. The initiative enabled employees to undergo preventive health screenings and receive professional medical guidance, supporting the early identification and management of potential health concerns.

Employee Well-Being Beyond Compliance

HRPTL maintains an employee welfare support mechanism through a contributory death assistance fund. Under this initiative, employees and workers voluntarily contribute to a common fund that provides financial assistance to the family of a deceased employee or worker. The programme serves as a social support measure, helping provide immediate financial relief to bereaved families during times of need and reinforcing a culture of mutual support and solidarity across the workforce.

Yoga Day Celebration

We celebrated International Yoga Day across our facilities, encouraging employees to participate in guided yoga sessions that promote physical fitness, mental well-being, and a healthy lifestyle. The initiative gave employees an opportunity to focus on holistic wellness, reduce stress, and enhance overall health.

Festival celebration

HRPTL celebrated Holi and Pongal across its facilities, bringing employees together to embrace cultural diversity and mark the traditions of its diverse workforce. From Holi's colours to Pongal's harvest festivities, these celebrations gave employees an opportunity to connect, build camaraderie, and experience the spirit of unity that comes with shared cultural moments-reinforcing an inclusive workplace that values diversity at every level.

CSR & Community Development

Product stewardship is embedded across our product lifecycle, from design and development to manufacturing and end-of-life considerations. The Company focuses on delivering high-quality, safe, and durable products while improving resource efficiency, optimising manufacturing processes, and promoting the use of recyclable materials wherever feasible. Through continuous innovation and responsible manufacturing practices, HRPTL seeks to minimise environmental impacts while meeting evolving customer and regulatory requirements.

Product quality and safety are fundamental to HRPTL's commitment to responsible manufacturing and customer satisfaction. Through our IATF 16949-certified Quality Management System product traceability mechanisms, and stringent testing procedures, we create positive impacts through enhanced product reliability, customer confidence, regulatory compliance, and operational excellence.

Product quality and safety are also critical to maintaining customer trust, operational reliability, and regulatory compliance. Challenges related to product defects, quality deviations, non-conformance with customer specifications, or limitations in product traceability may influence product performance, customer operations, and brand reputation. We address these considerations through preventive quality controls, process monitoring, rigorous testing, product traceability systems, and continuous improvement initiatives to ensure consistent product quality and reliability.

At HRPTL, product stewardship is supported through robust quality management systems, process controls, product traceability mechanisms, and continuous improvement initiatives.

Our manufacturing operations are guided by internationally recognized management systems as detailed below:

HRPTL recognises that its operations can influence the social and economic well-being of communities surrounding its manufacturing facilities. Through its CSR and community development initiatives, the Company seek to create positive impacts by supporting education, health and sanitation, environmental sustainability, skill development, and community welfare. These initiatives contribute to improving quality of life and strengthening community resilience.

Through continuous stakeholder engagement and alignment of its initiatives with local development priorities, we strive to create meaningful and lasting social value. We are committed to implementing responsible and sustainable community development programmes that support inclusive growth, strengthen community well-being, and contribute to long-term societal progress.

Our CSR strategy rests on four pillars - Education, Healthcare, Environment & Sustainability, and Community Development through which we invested ₹40.1 million in FY 2025-26, reaching over 7,450 beneficiaries. Education received the largest allocation (₹24.0 million, 1,000+ students), while Community Development had the widest reach (₹9.8 million, 3,000+ beneficiaries), reflecting our commitment to both depth and breadth of social impact.

Our Pillars of CSR

OUR FOUR PILLARS OF CSR

CSR PILLAR 1

Education

PROGRAMME DETAILS

Strengthening foundational and digital literacy, early childhood education, and sports infrastructure for students and children in communities surrounding our manufacturing facilities.

- Delivered in partnership with sector-specialist foundations, including the Utsav Foundation and SRF Foundation
- Combines infrastructure upgrades with hands-on skill-building and training
- Prioritises underserved communities near our operating locations

₹24.0 Million

CSR Contribution

1000+

Students Impacted

Utsav Foundation — Ankuram Lab

A fully equipped, professionally managed computer laboratory established to strengthen foundational IT knowledge and digital learning access for students.

- 400+ students benefited from the initiative

Anganwadi Development Program by SRF Foundation

Strengthened early childhood education by improving infrastructure, learning environments, and encouraging parental participation in children's development.

- 500+ children benefited from the initiative
- Improved learning infrastructure and educational facilities at Anganwadi centres
- Enhanced staff capabilities through targeted training
- Increased parental involvement, supporting children's early learning

Indoor Shooting Range Stadium, Punjab Public School, Nabha

Supported the development of a modern indoor shooting range stadium to strengthen sports infrastructure and promote excellence in shooting sports among students.

- Enhanced sports infrastructure with a state-of-the-art indoor shooting range

Scholarship Program of Academic students

Scholarships were provided to underprivileged students

- 20 students were awarded scholarship for their academic year and study support

CSR Pillar I: EDUCATION

PROGRAMME DETAILS

Addressing healthcare needs across the life course- elderly care, disability rehabilitation, adolescent menstrual health, and mental health rehabilitation for underserved and vulnerable groups.

- Delivered in partnership with specialist NGOs and foundations, including Little Drops, RANN Foundation, and Rehoboth & Caritas India
- Combines direct care and nutrition support with awareness and community-based rehabilitation
- Focused on vulnerable groups in communities surrounding our operating locations

₹5.0 Million

CSR Contribution

2500+

Beneficiaries Impacted

Projects

Elderly Care & Rehabilitation Support - Little Drops

Enhanced the well-being of senior citizens by providing comprehensive care, nutrition, healthcare, and rehabilitation services in a safe, supportive environment.

- 200+ elderly residents benefited at Little Drops, Chennai
- Improved physical and emotional well-being through consistent care and support
- Promoted dignity, comfort, and social inclusion among senior citizens

Community-Based Rehabilitation, Nuh District

Enhanced the well-being and social inclusion of persons with disabilities through a community-based rehabilitation approach.

- 510 persons with disabilities benefited across 13 villages in 10 panchayats of Nuh district
- Improved access to healthcare, education, and social welfare programmes
- Enhanced social inclusion and community participation

Pankh by RANN Foundation

A menstrual health and hygiene initiative improving awareness, accessibility, and adoption of safe menstrual hygiene practices among adolescent girls and women.

- 1,800+ adolescent girls and women benefited from the initiative
- Improved menstrual hygiene practices and reduced associated stigma

MANASI by Rehoboth & Caritas India

A rehabilitation and reintegration initiative supporting women recovering from mental illness through sustained care and community-based support systems.

- 20 beneficiaries received rehabilitation and reintegration support
- Improved emotional stability and enhanced community integration

CSR Pillar 2: HEALTHCARE

CSR PILLAR 3

Environment & Sustainability Initiatives

PROGRAMME DETAILS

Improving waste management practices, sanitation infrastructure, and community participation in sustainable environmental stewardship in villages surrounding our facilities.

- Delivered in partnership with environmental NGOs, including SAAHAS
- Combines physical infrastructure (electric vehicles, Resource Recovery Centres) with community engagement through the Gram Sabha
- Focused on sanitation and waste management in communities near our operating locations

₹1.3 Million

CSR Contribution

950+

Beneficiaries Impacted

Projects

Solid Waste Management - Project “Unnati” by SAAHAS NGO

Improved waste management practices, enhanced sanitation infrastructure, and encouraged community participation in sustainable waste management and environmental stewardship.

- 950+ households benefited in Rozka Meo, Nuh, supported by improved daily waste collection using electric vehicles (EVs)
- 6.5 tonnes of dry waste processed at the Resource Recovery Centre (RRC)
- Enhanced village cleanliness and sanitation through regular waste collection and processing
- Strengthened local waste management systems through community participation and institutional support

CSR PILLAR 4

Community Development Initiatives

PROGRAMME DETAILS

Supporting public safety, sporting talent, and cultural inclusion in communities surrounding our manufacturing facilities.

- Delivered through direct contributions and partnerships with local industry associations and foundations
- Combines infrastructure support for public institutions with sponsorship of individual talent and community events

₹9.8 Million

CSR Contribution

3000+

Beneficiaries Impacted

Projects

Support to Superintendent of Police Office, Nuh

Joint contribution towards the procurement of a vehicle with the Roz Ka Meo Industrial Association for the SP Office, Nuh, supporting law-and-order, public safety, and community development.

- Strengthened local law enforcement capabilities
- Enhanced support for public safety and emergency response activities

Planning of CSR Initiatives for FY 26-27

Supporting National Badminton Champion Raghu M

Sponsorship of Raghu M, a National Badminton Champion, supporting his training and preparation for participation in international tournaments.

- Encouraged sporting excellence and youth development
- Supported the athlete's journey toward international representation

Diwali Mela Celebration

A vibrant Diwali Mela organised at the IMT Manesar unit in collaboration with students from underprivileged communities supported by the Utsav Foundation.

- Strengthened community bonding and employee engagement
- Promoted cultural inclusion and festive celebration

Our CSR initiatives are spread across Haryana, Punjab, Maharashtra, and Tamil Nadu, focusing on education, skill development, women empowerment, health and hygiene, disability inclusion, environmental sustainability, and community development. Through targeted interventions, we aim to create sustainable social impact and improve the quality of life of underserved communities. Key initiatives for the next financial year will include the bellowed mentioned initiatives:

01

Remedial Learning Initiative to strengthen foundational learning outcomes among students.

02

Highway Scholars Scholarship Program to support access to education for deserving students.

03

Development of Indoor Shooting Range at Punjab Public School, Nabha to promote sports excellence and talent development.

04

Centres of Excellence (CoEs) in ITIs to enhance technical skills and employability among youth.

05

Auto Sector Skill Program for Women to promote women's participation in skilled employment.

06

Menstrual Hygiene Management (MHM) Program to improve awareness and menstrual health among adolescent girls and women.

07

Community Rehabilitation for Persons with Disabilities (PwDs) to enhance inclusion and access to essential services.

08

Crop Residue Management (CRM) Initiative to mitigate climate change impacts through sustainable agricultural practices.

09

Building Climate-Resilient Communities to strengthen community preparedness and adaptive
